

ECCO CAR

We are Urban
We are Efficient
We are The Future

Innovate in the way you move.

Connect. Freedom. Urban.
Efficiency. Saving. Electric.

01. White Label App

02. Connected Car

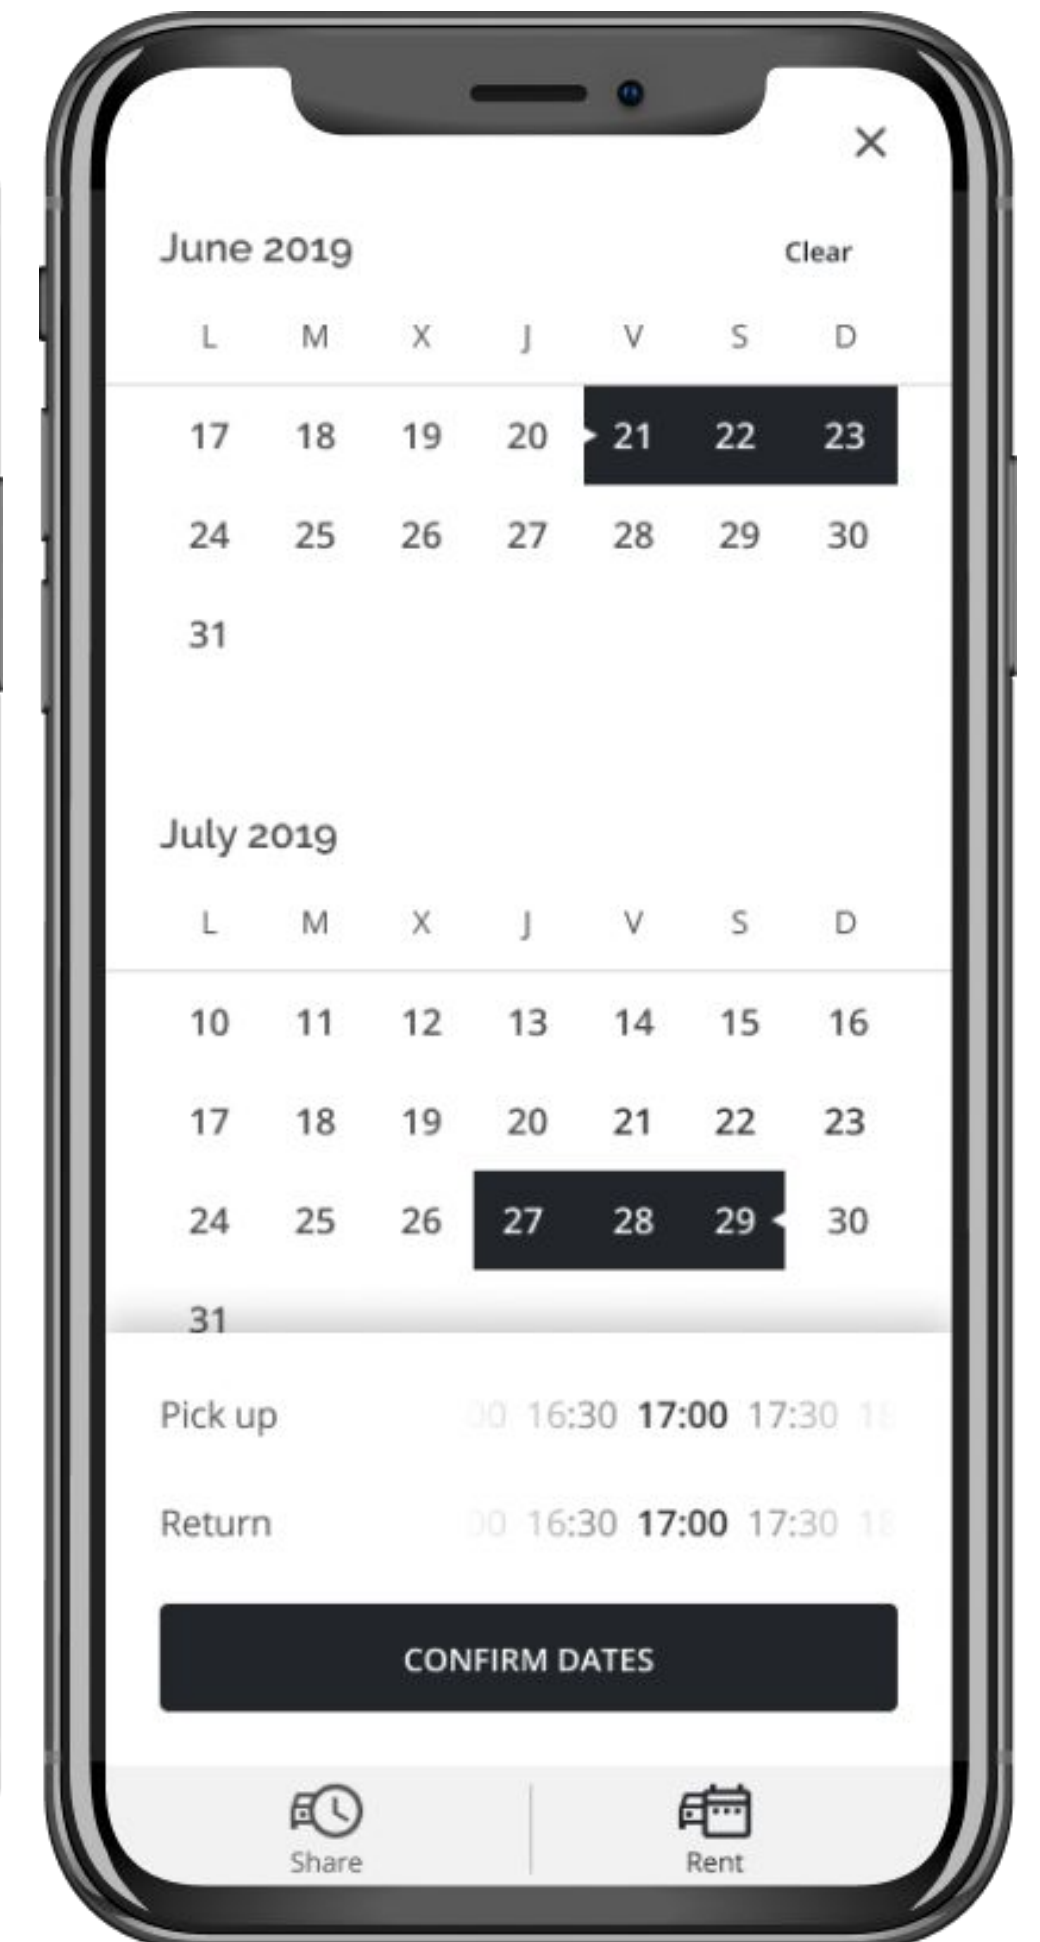

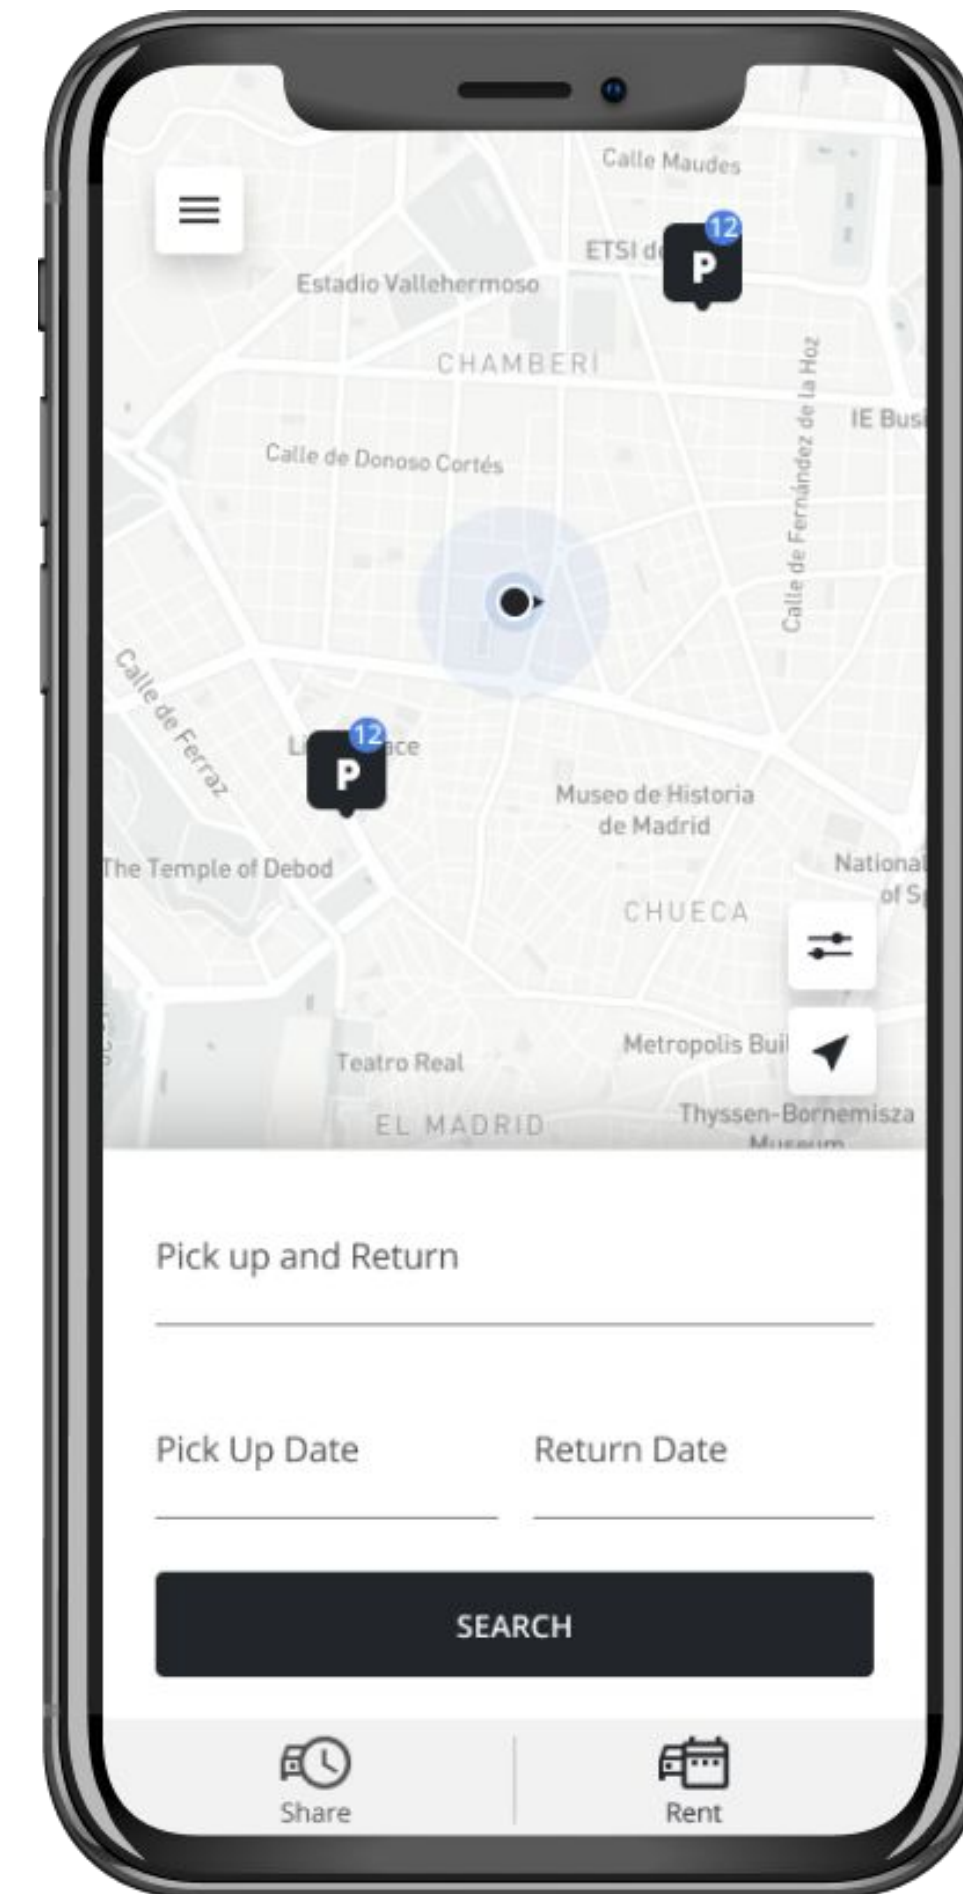

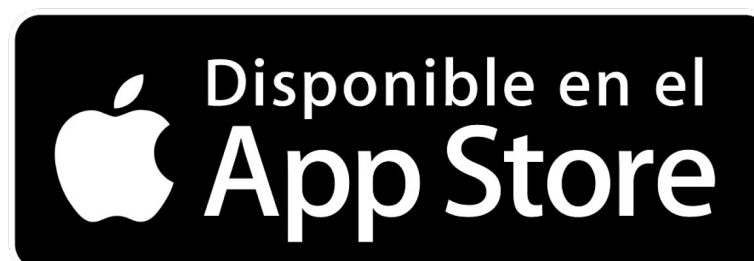

03. Planning

An aerial photograph of a winding asphalt road on a steep, forested mountain slope. The road features several sharp, hairpin turns. The surrounding landscape is covered in dense green trees, with some rocky outcrops and patches of snow or light-colored soil visible. The overall scene is captured from a high angle, looking down at the road as it curves through the terrain.

01. White Label App

01. White Label App

Available in iOS and Android.

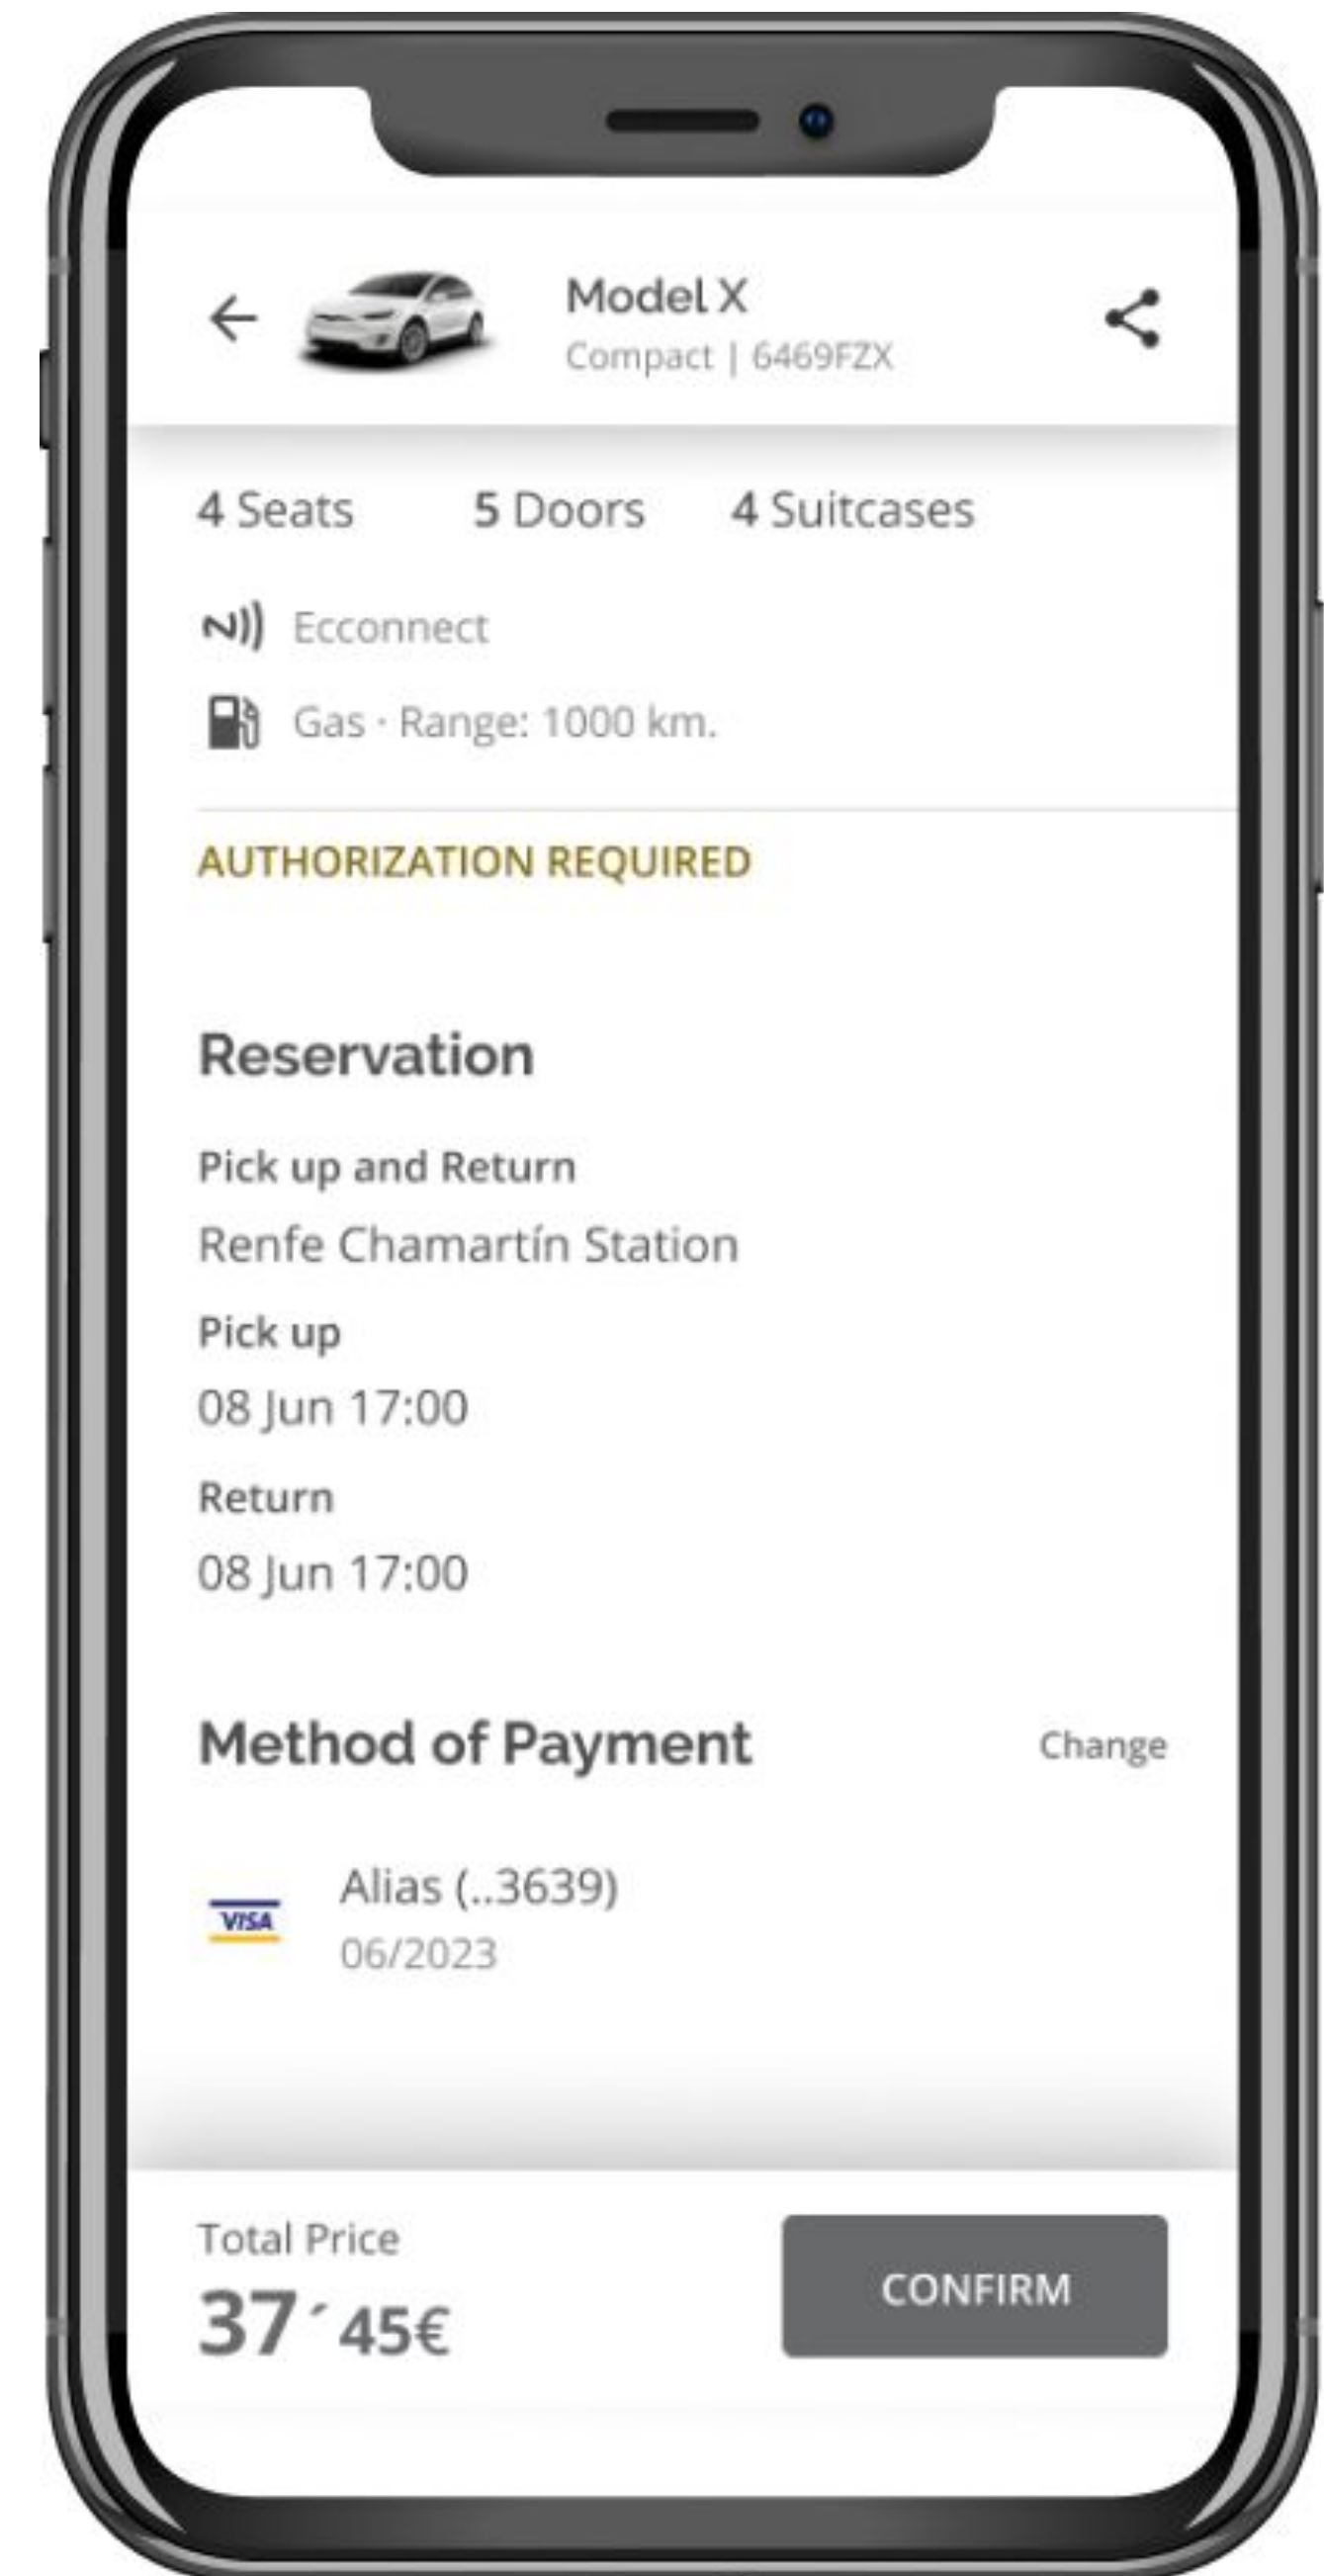

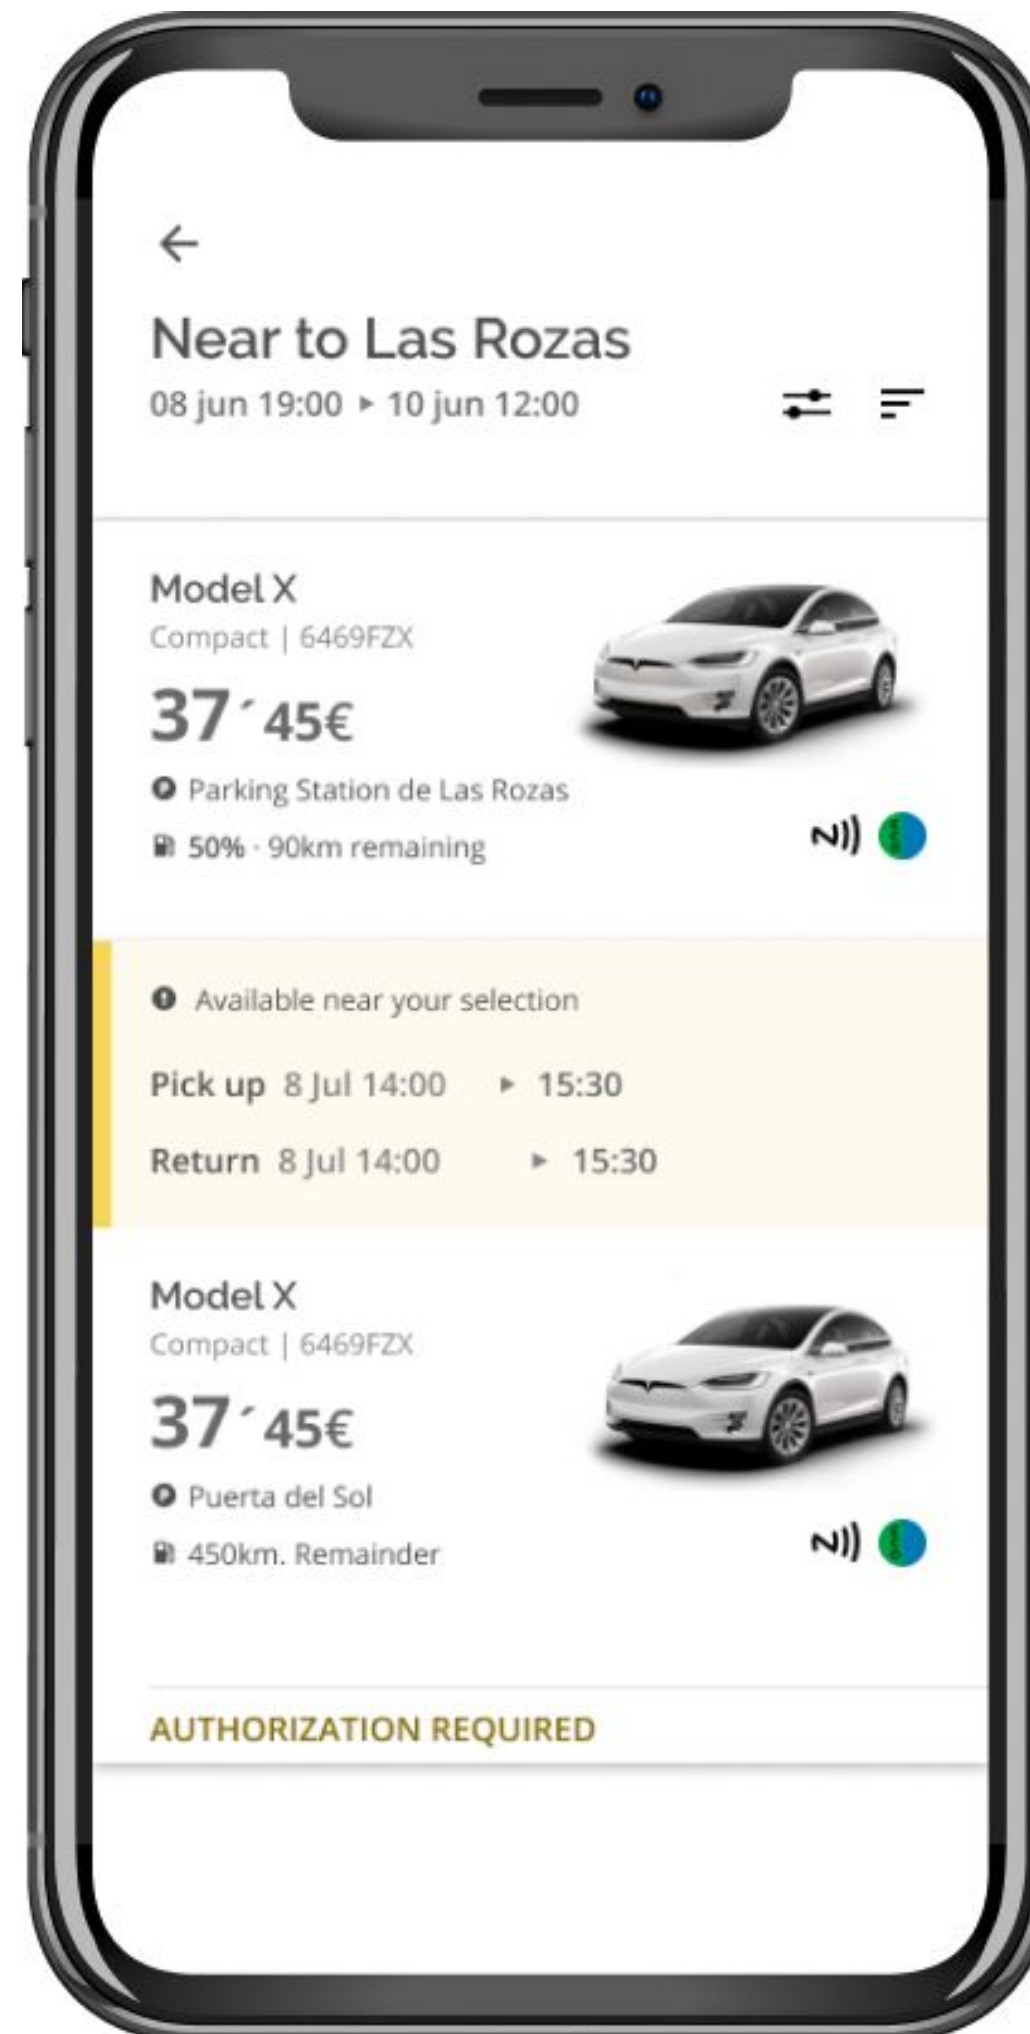

We will create a customizable app that will allow your customers to access the fleet available in your parking lots and select the dates of their reservation.

Solutions

Reservations

It is not necessary for cars to have a device connected to appear in the app.

Your customers will be able to see the cars available on the selected dates and make a reservation.

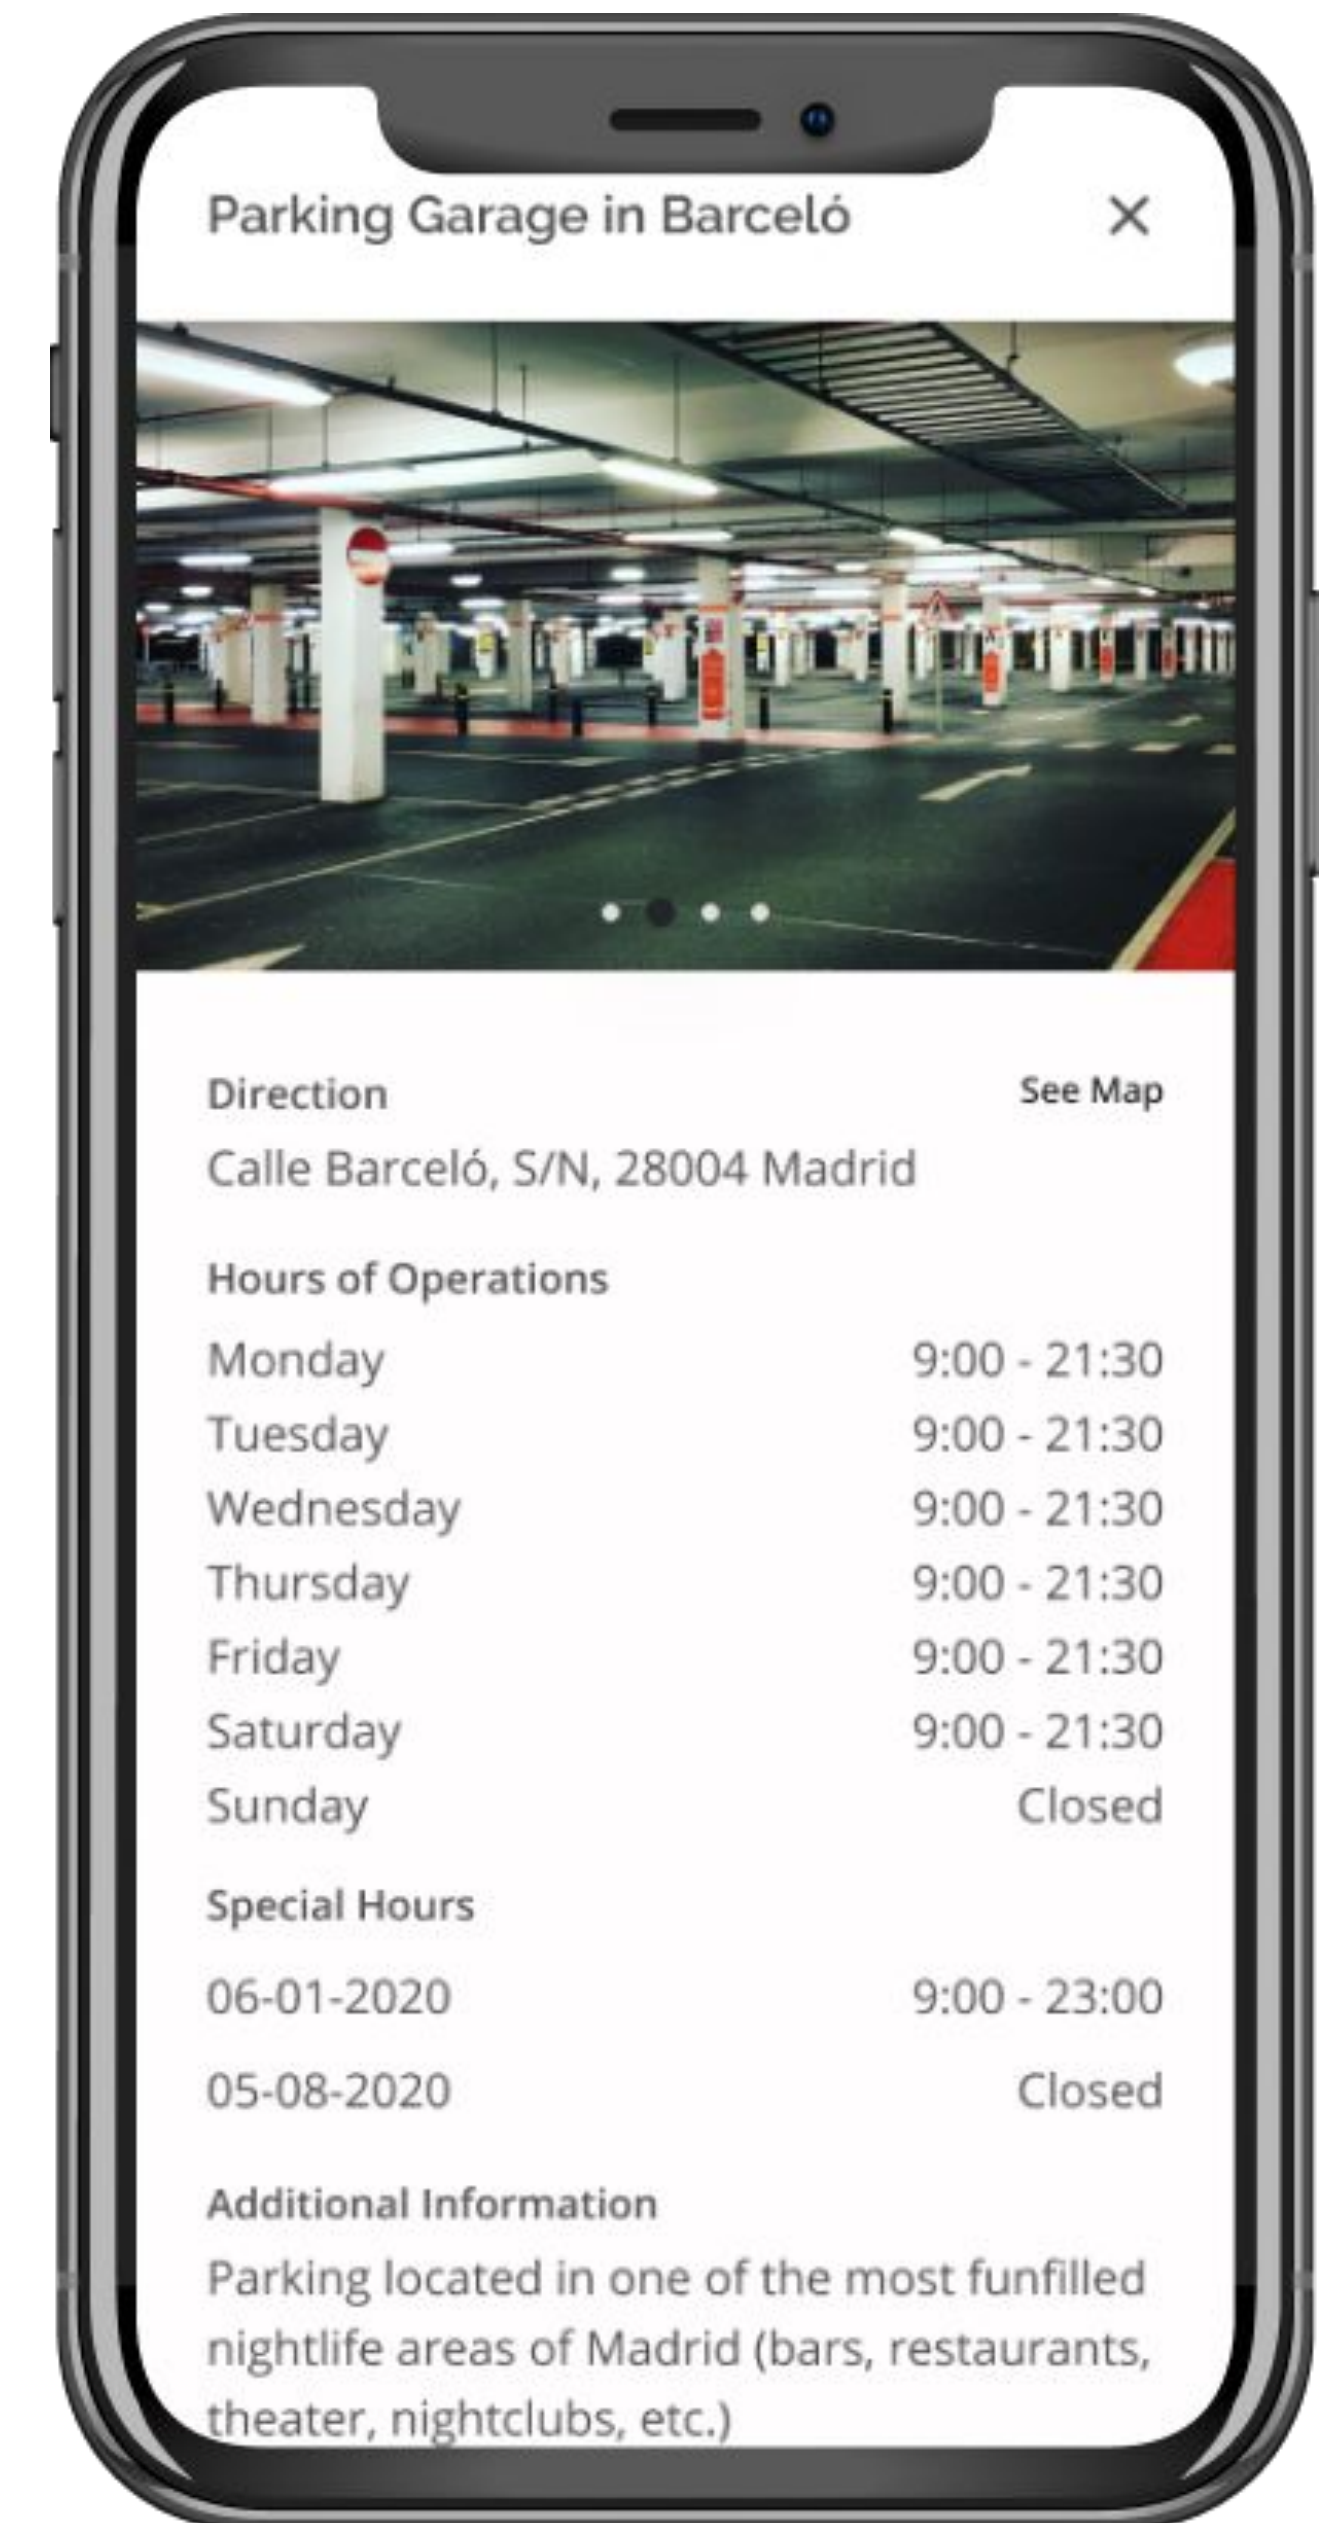

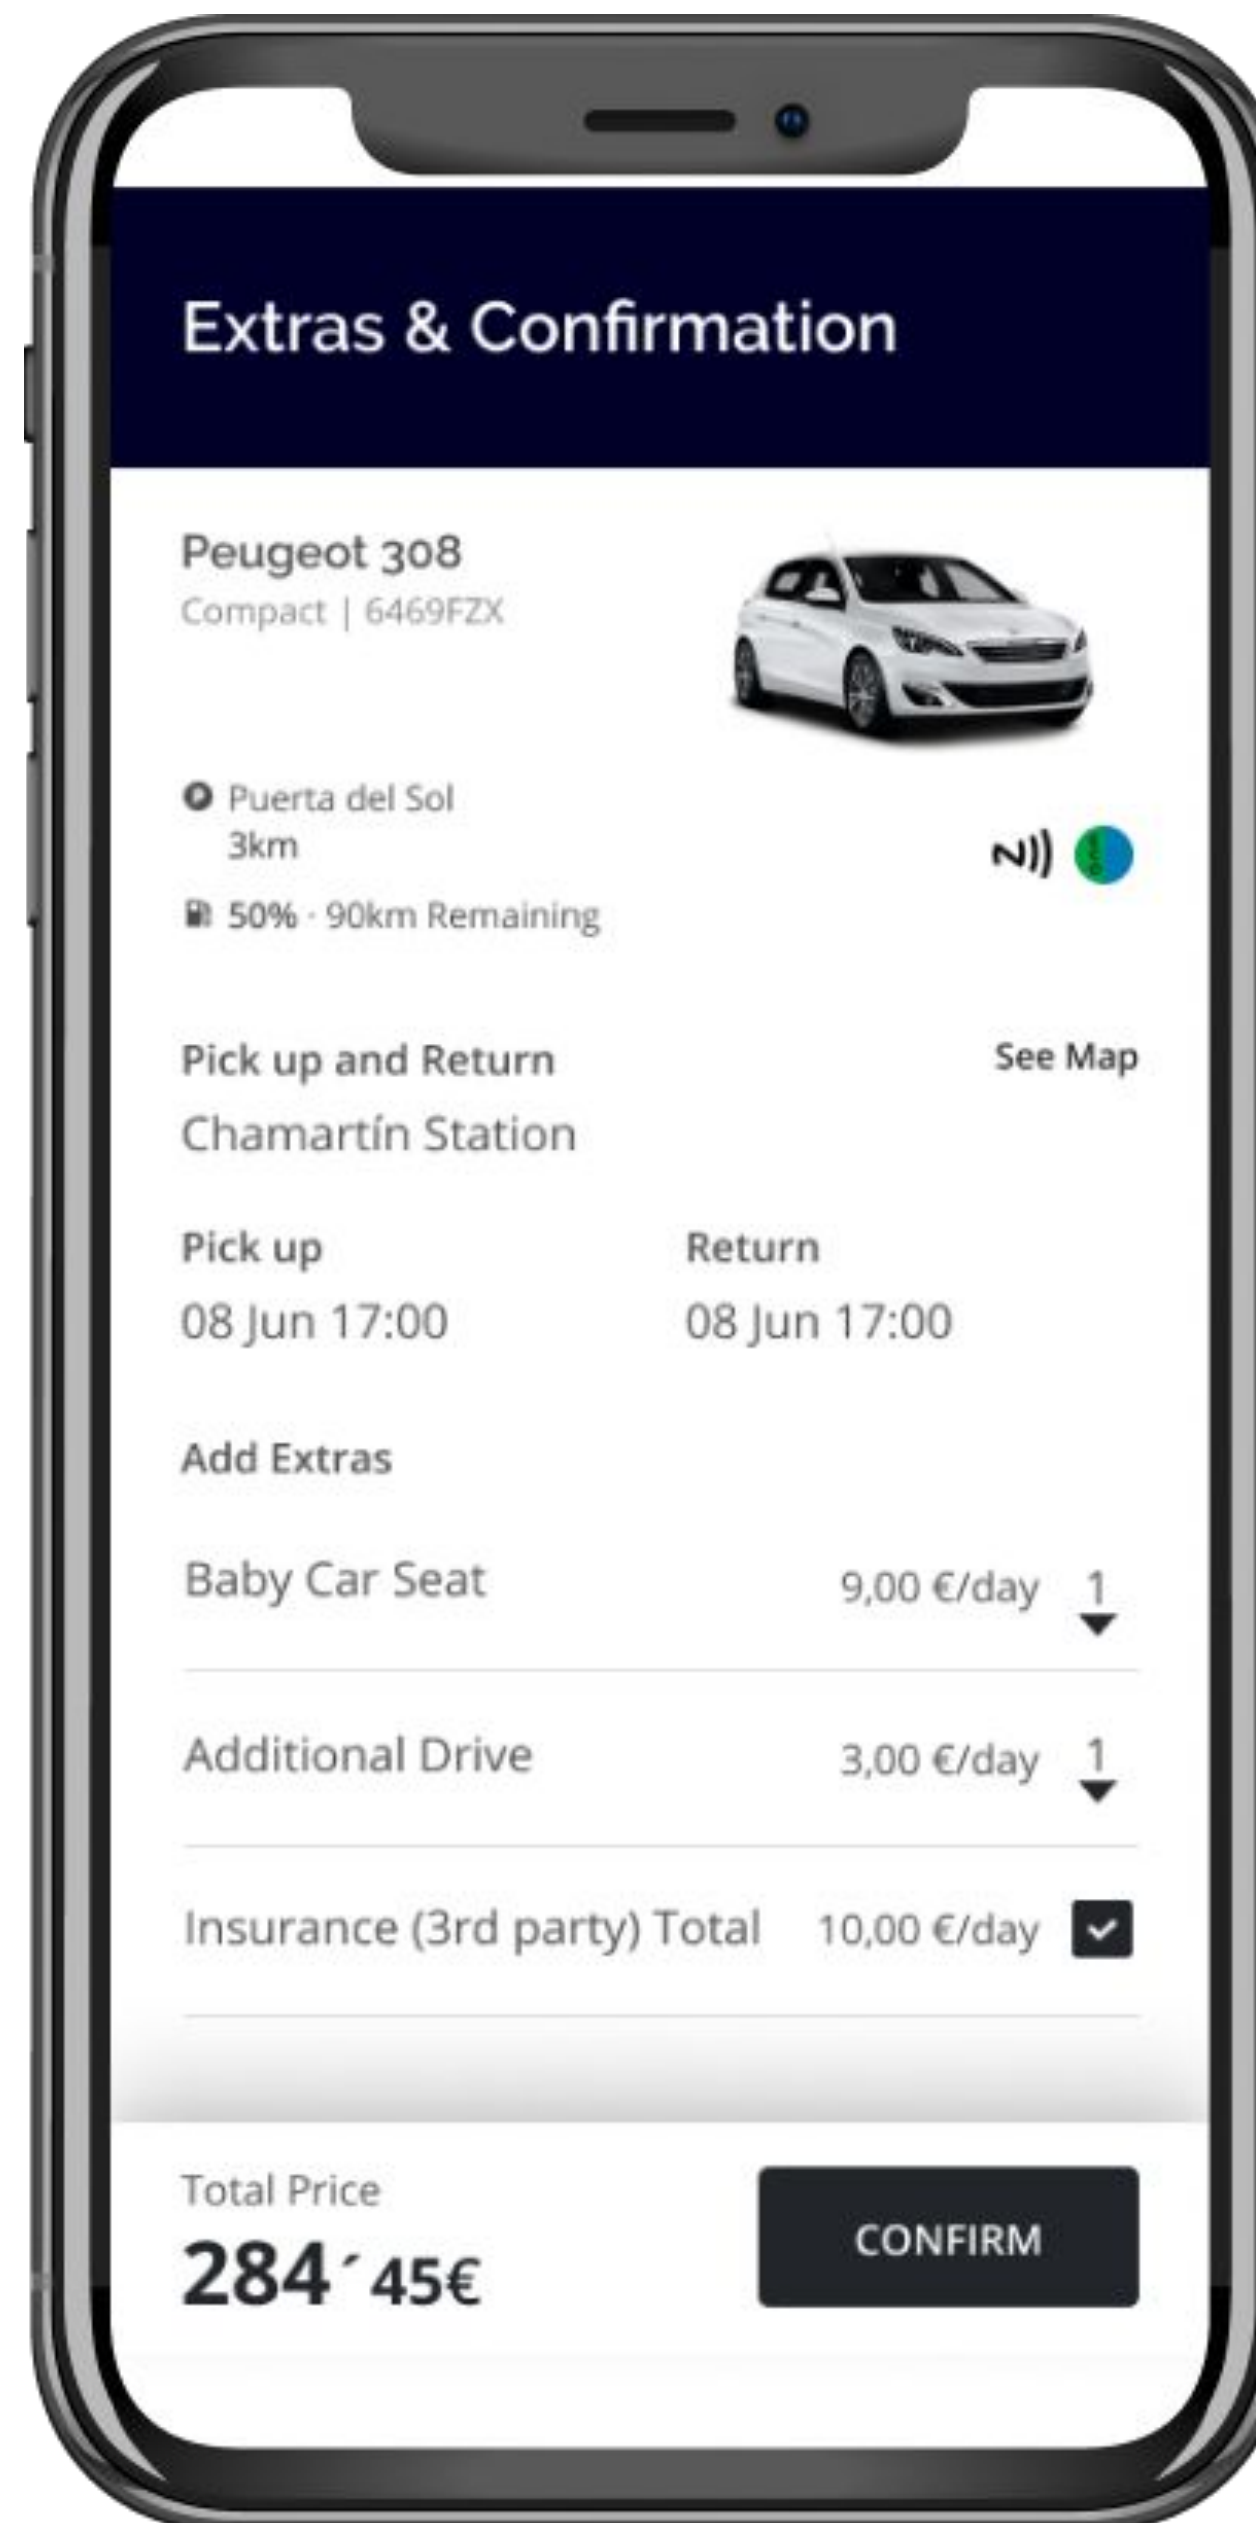

Solutions

Extras

The client can opt for extras, including insurance, that they wish to have without any issues through the App when placing a reservation with the conditions that you offer.

Client can also have access to information of their interest, such as the info related to the car parking lots where the vehicles of each reservation are located to improve the customer experience.

Solutions

History of Reservations

Each user can access the summary of all their reservation history: Start and end data, price, vehicle details and contracts, invoice linked to it etc.

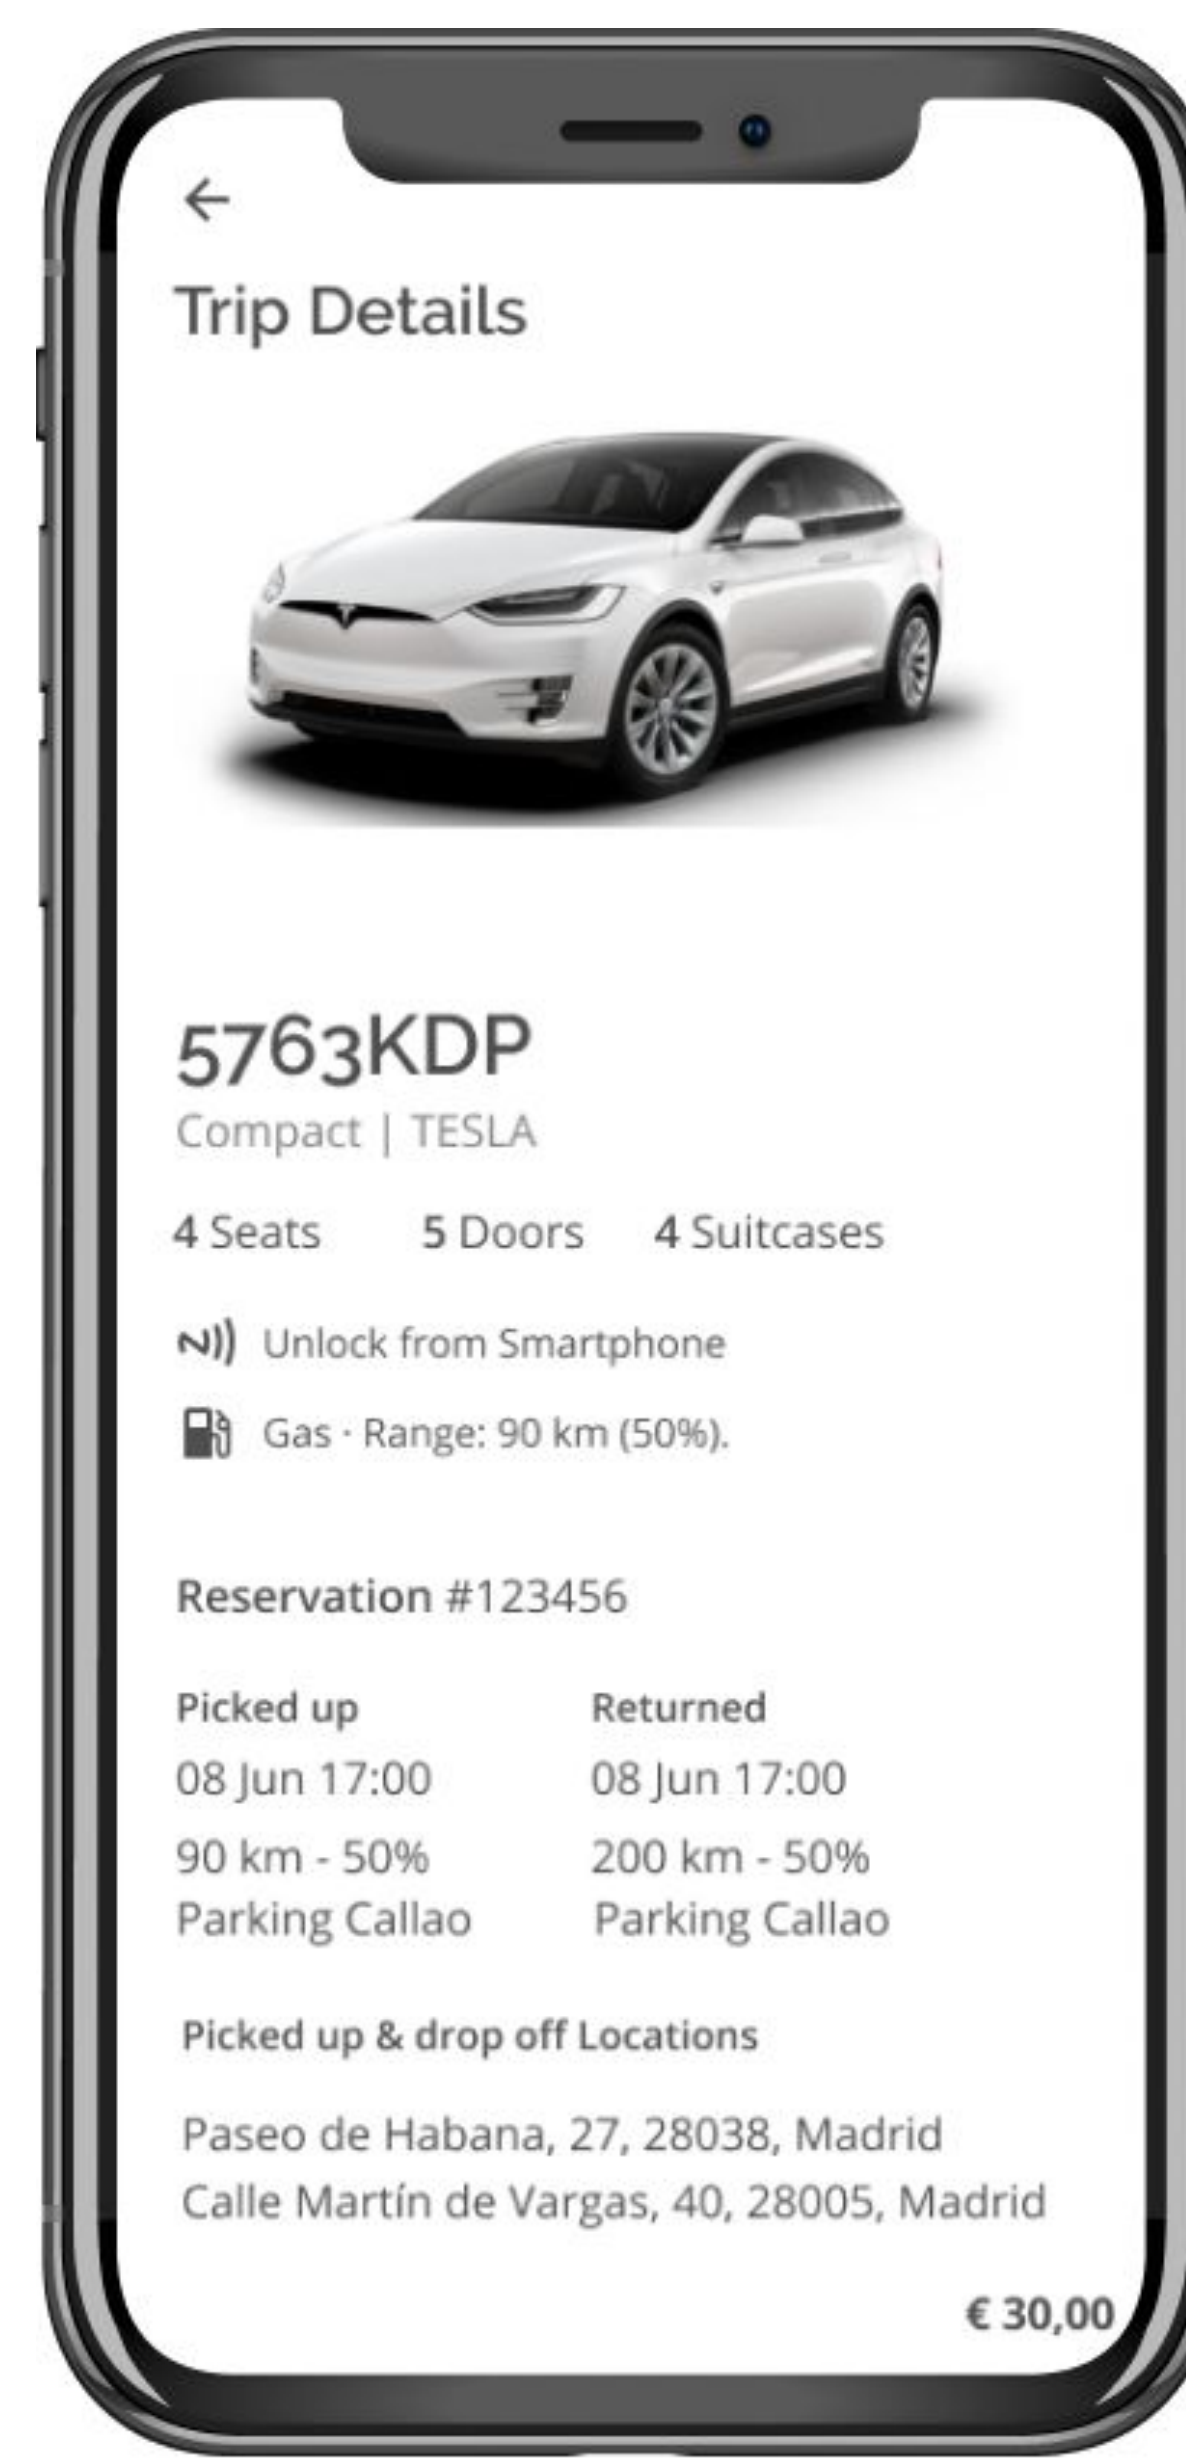

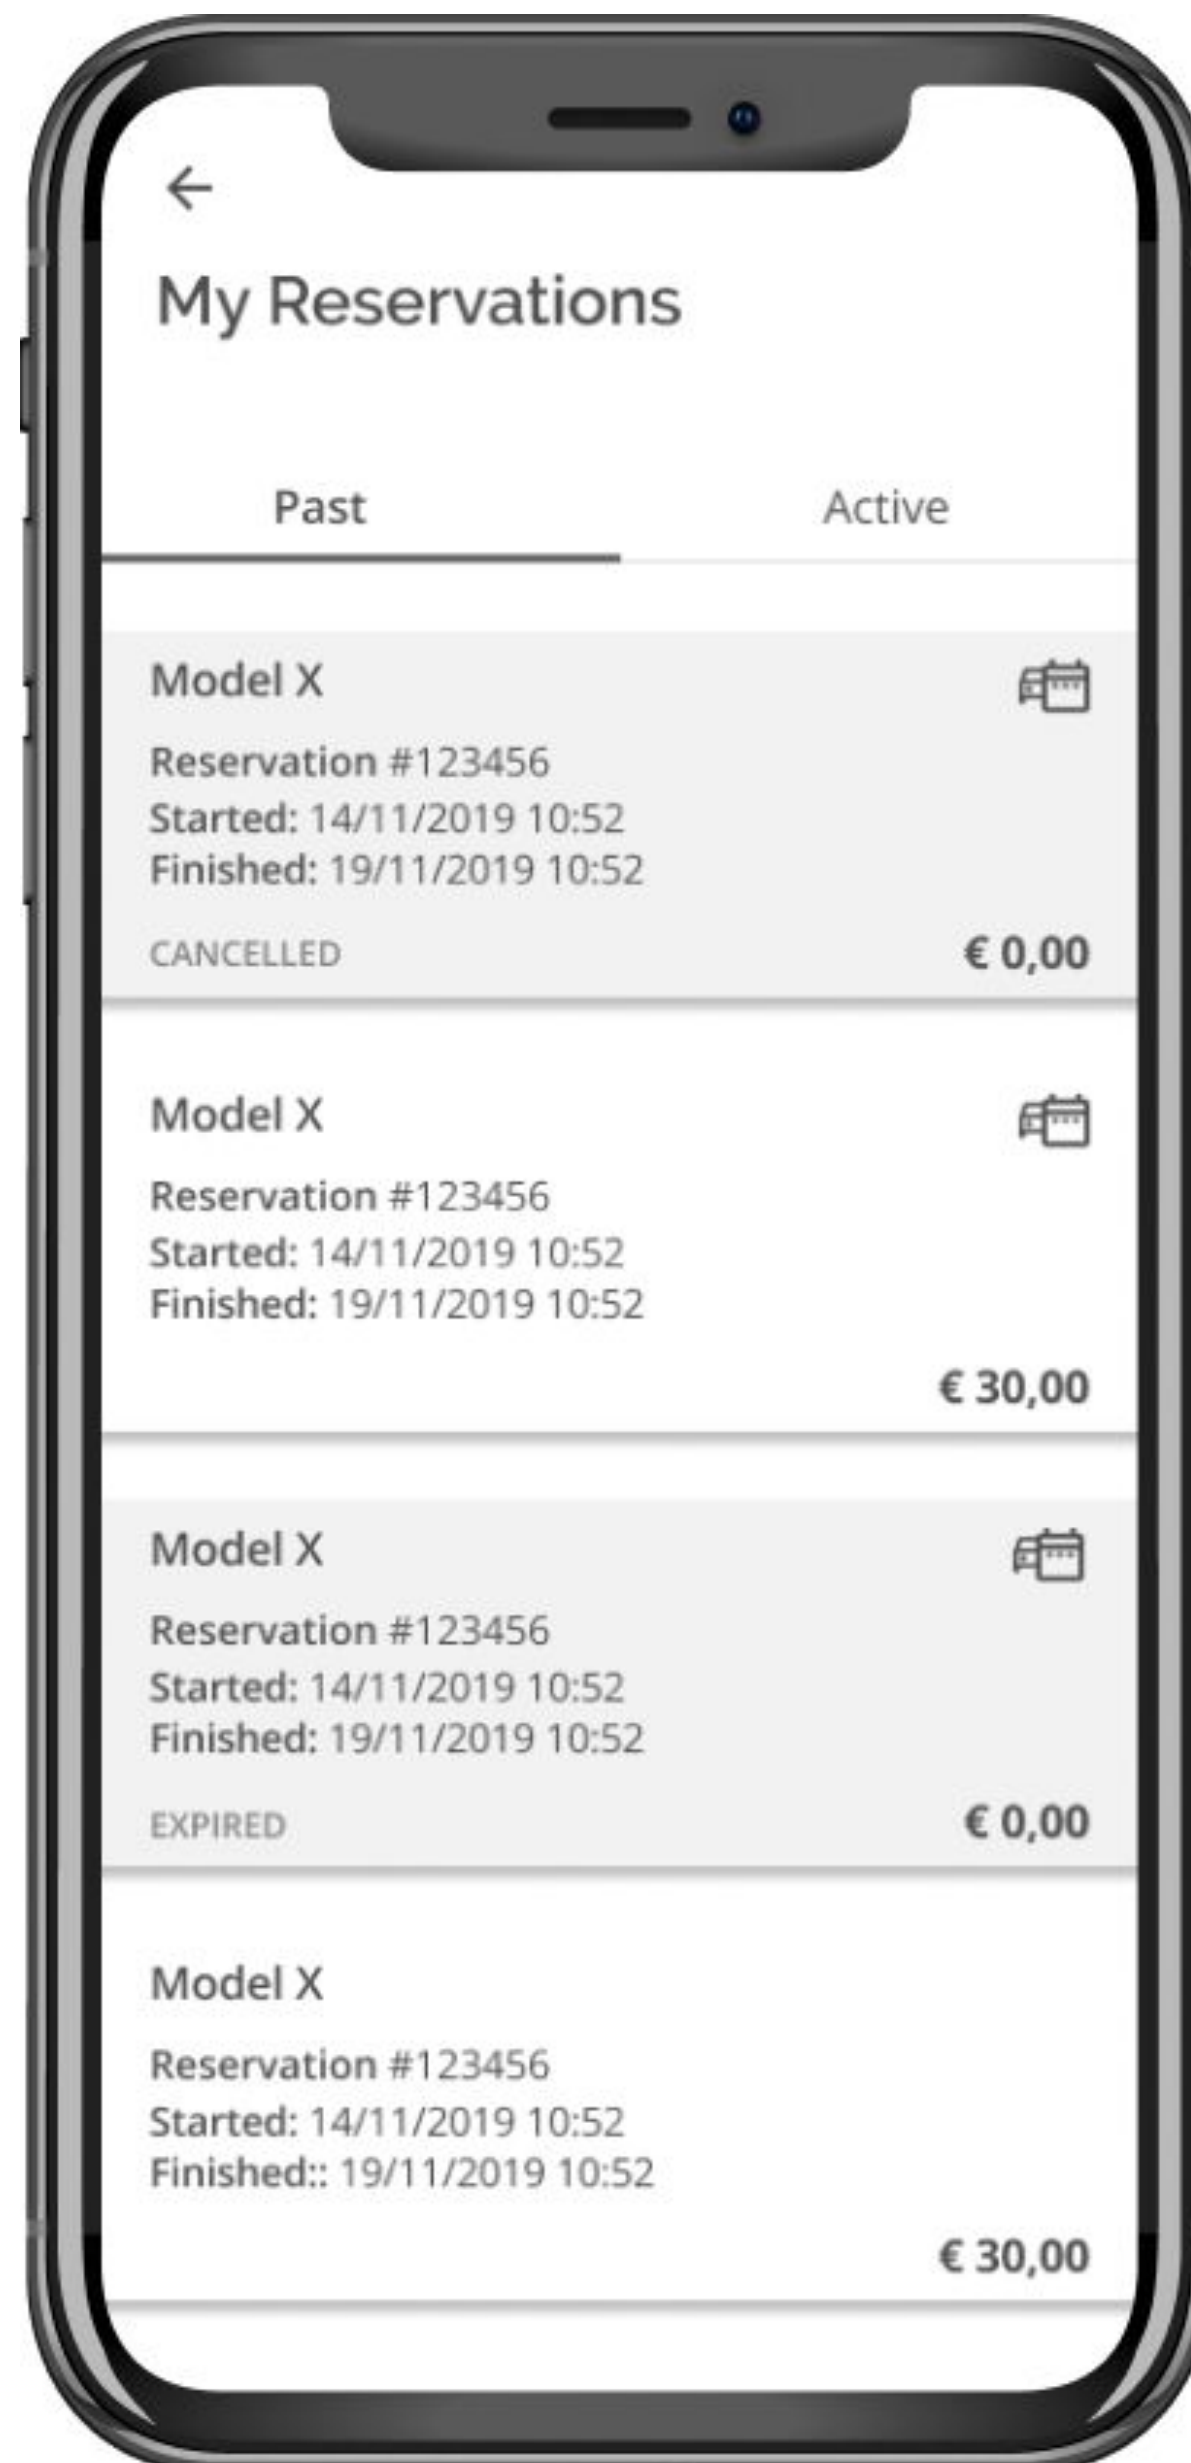

Invoice

Contract Annex 1

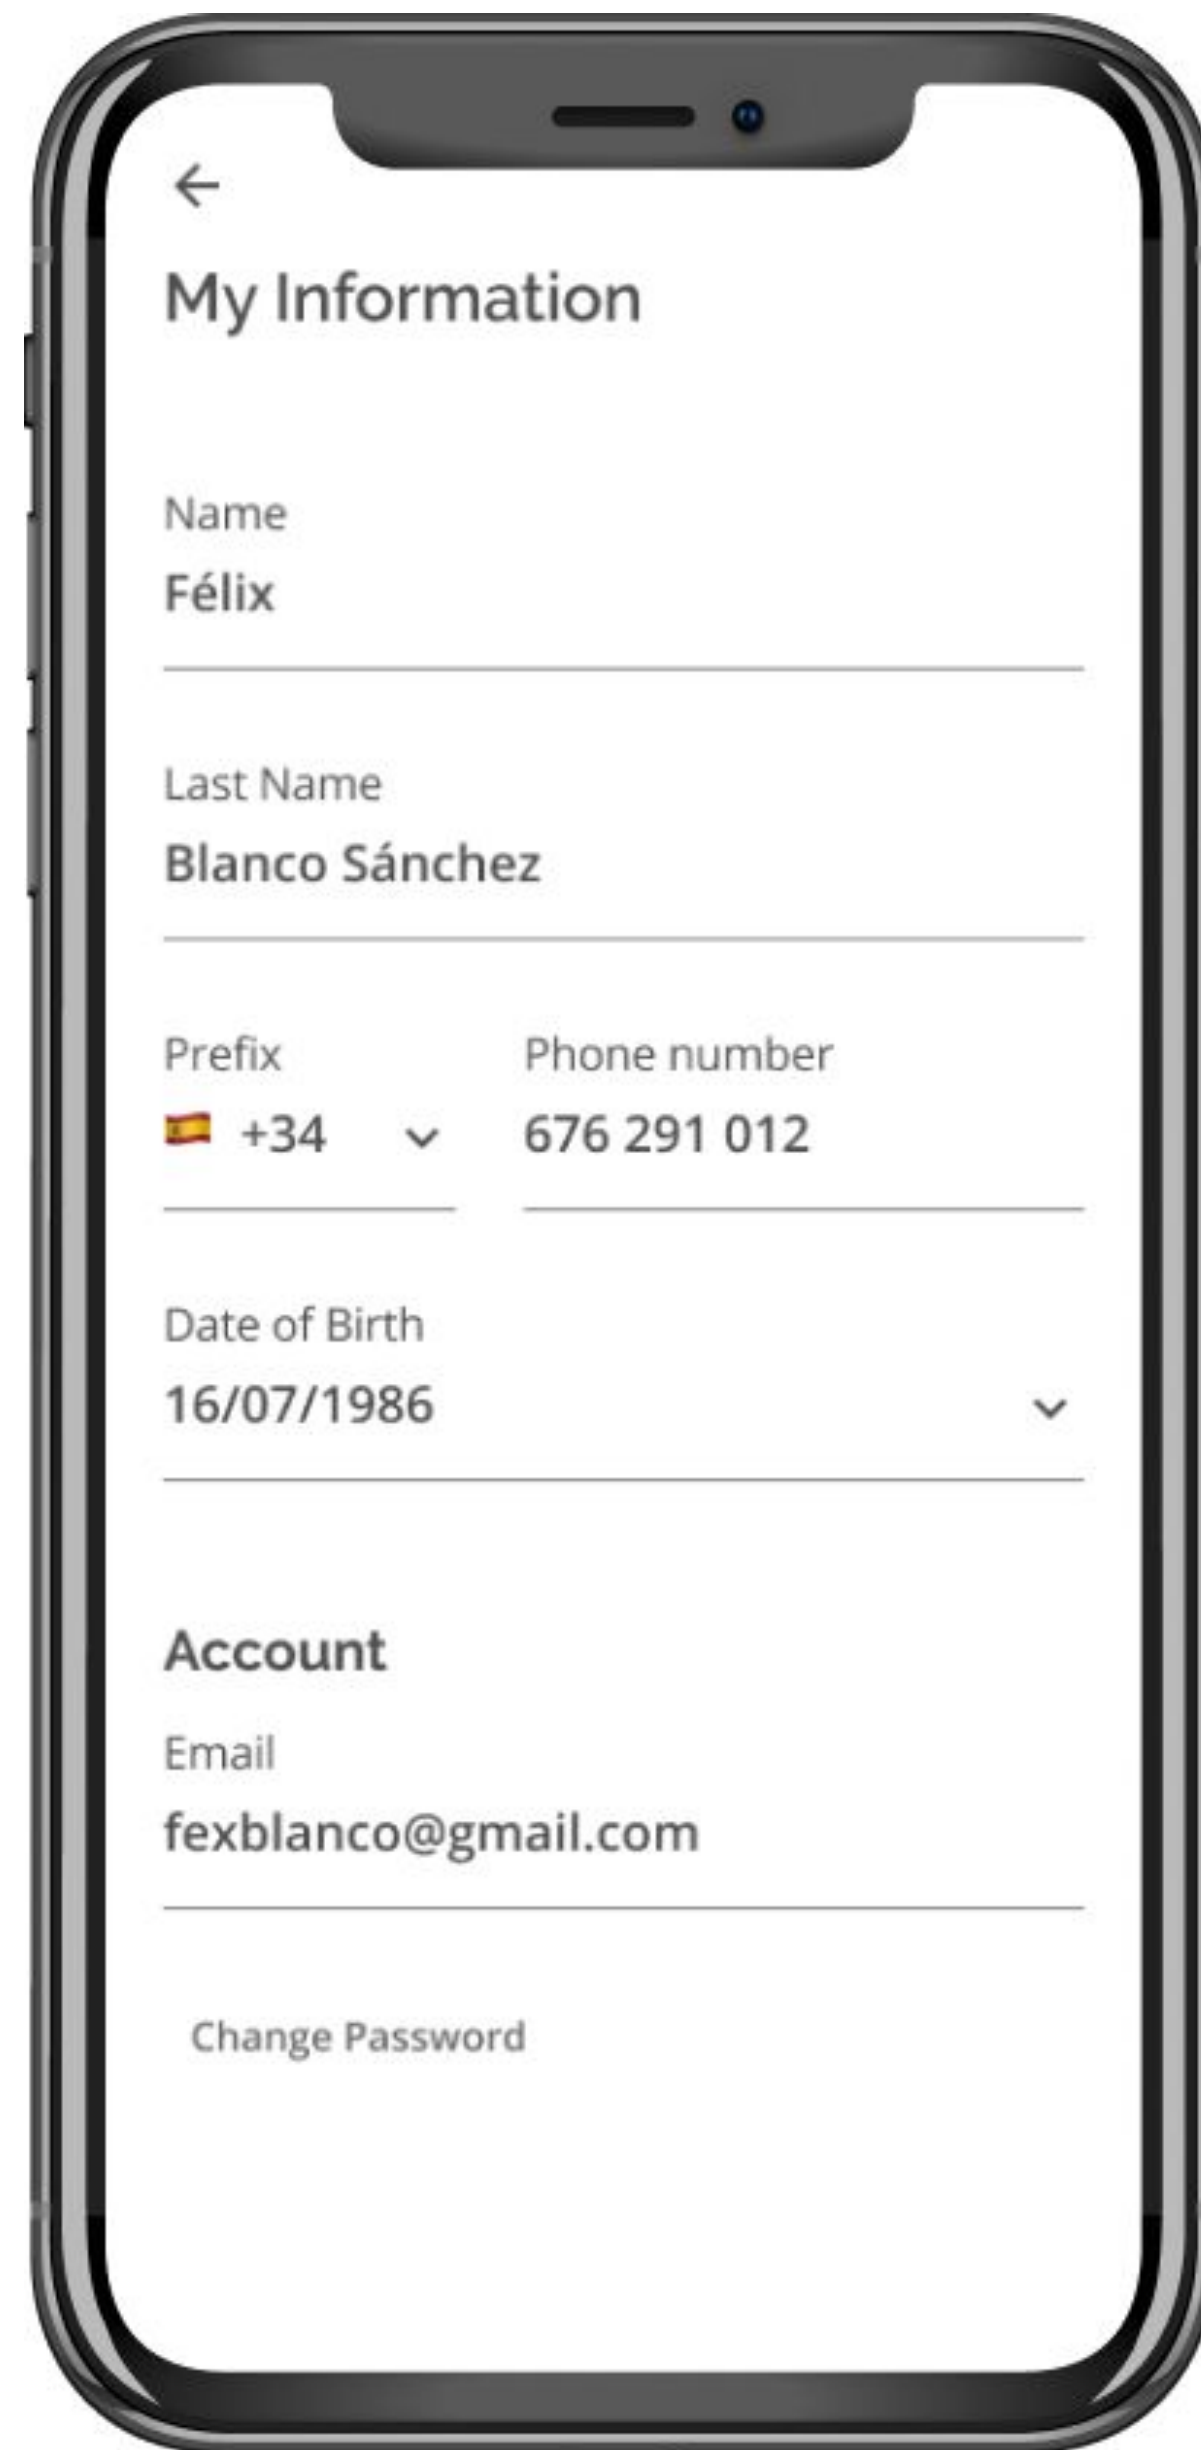

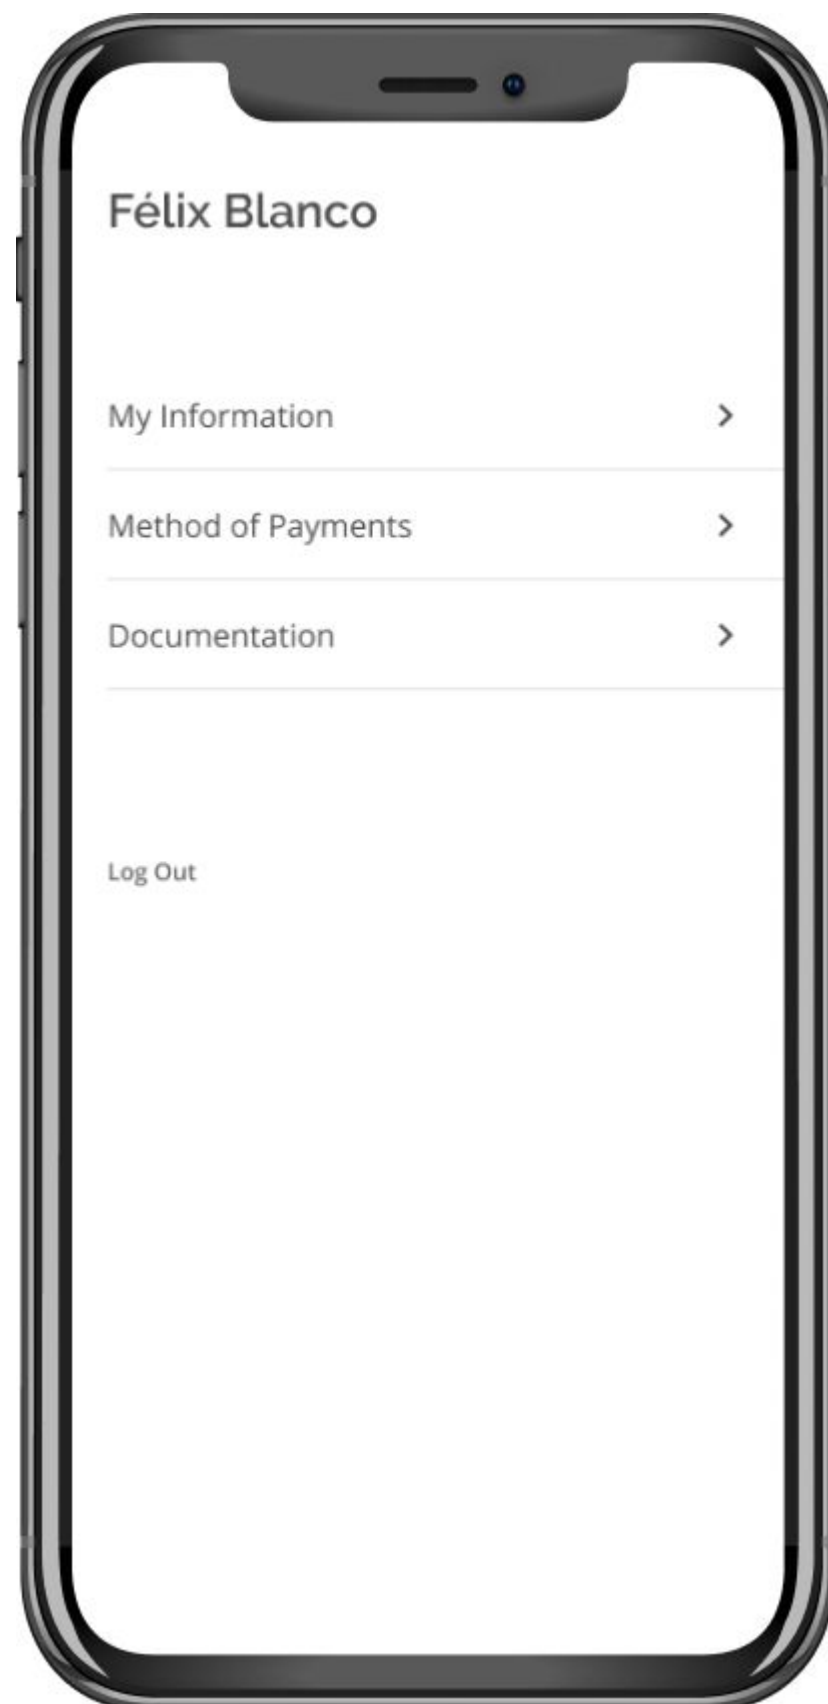

Contract Annex 2

Solutions

Profile

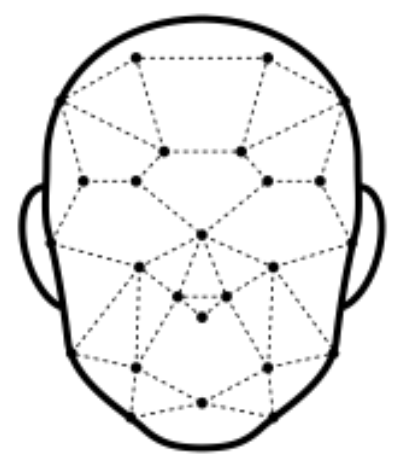

Each client will have a profile with their personal contact information, their documentation and their saved payment method information.

The client can view and update their profile. The rent a car *Administrator* can validate the data, enabling the user to make reservations.

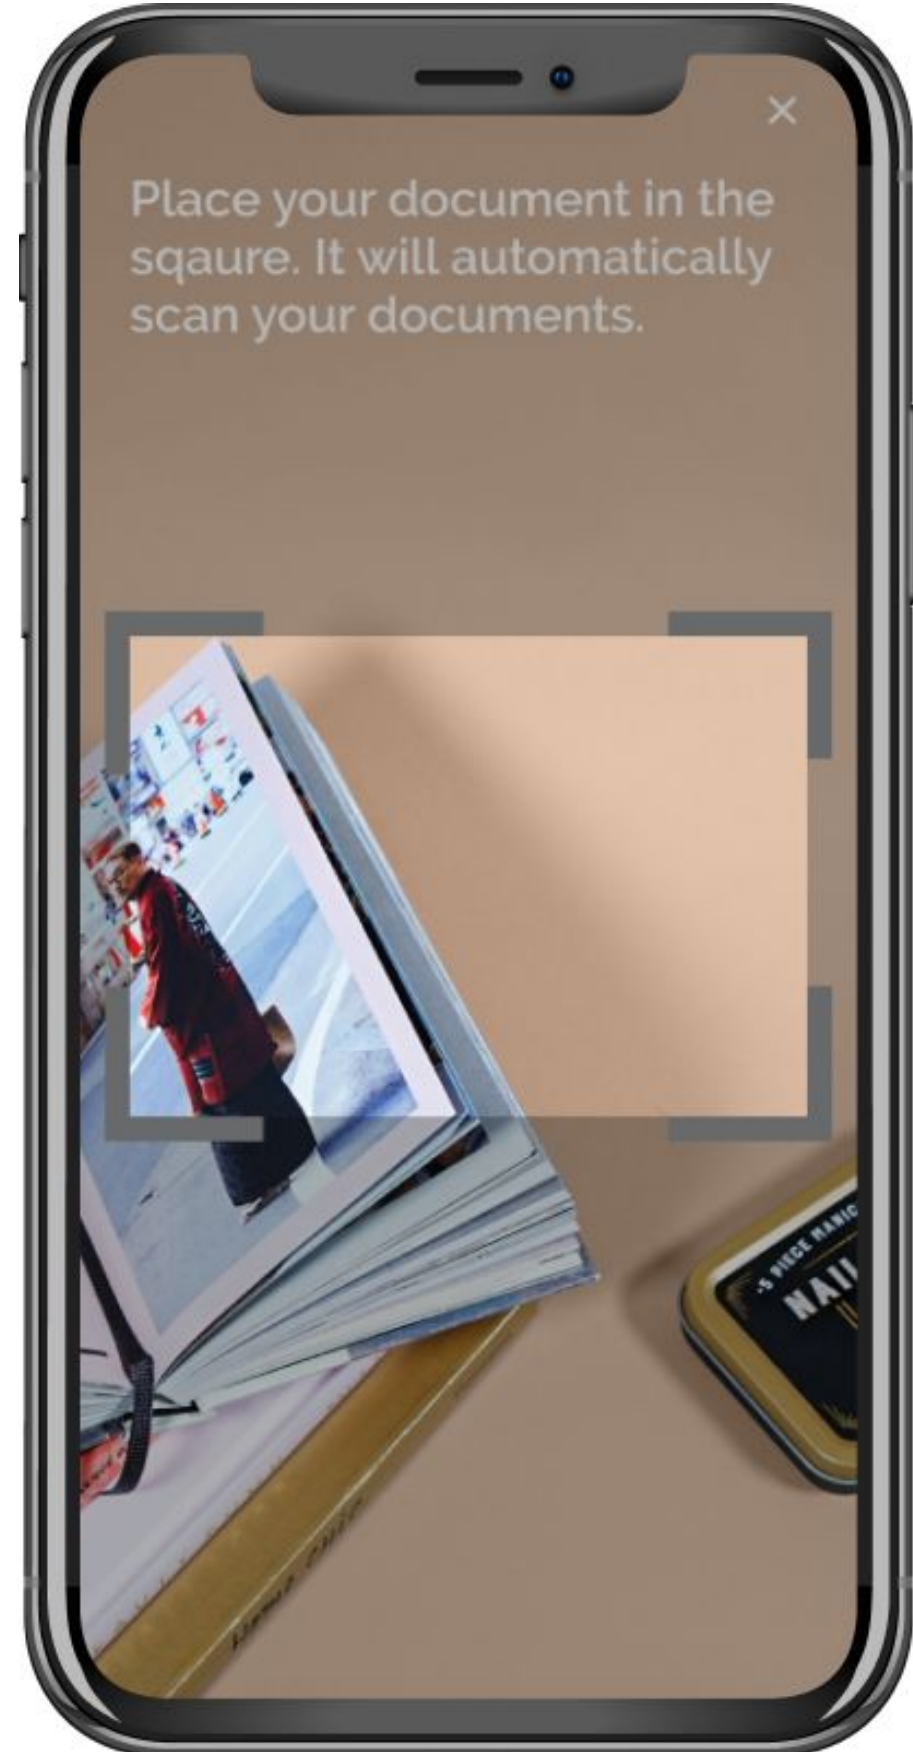

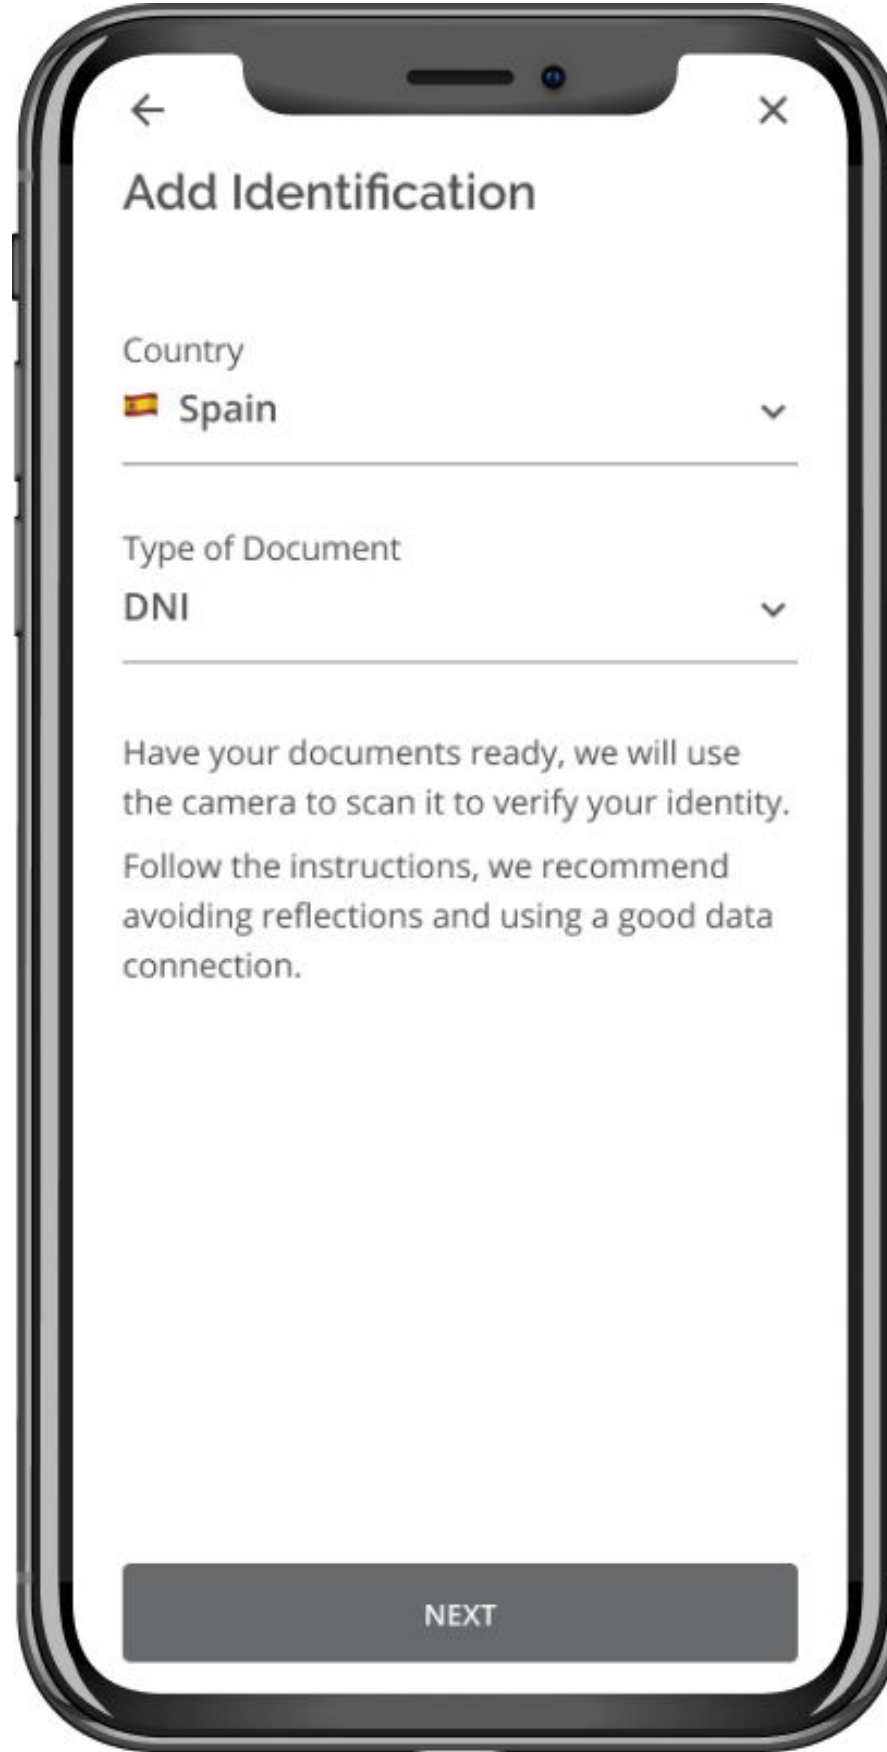

Solutions

OnBoarding

The validation of the new profiles can be done automatically by biometric validation through the Video ID of the App.

Through the App, customers can also complete the registration process by uploading their documentation: ID, driving license etc.

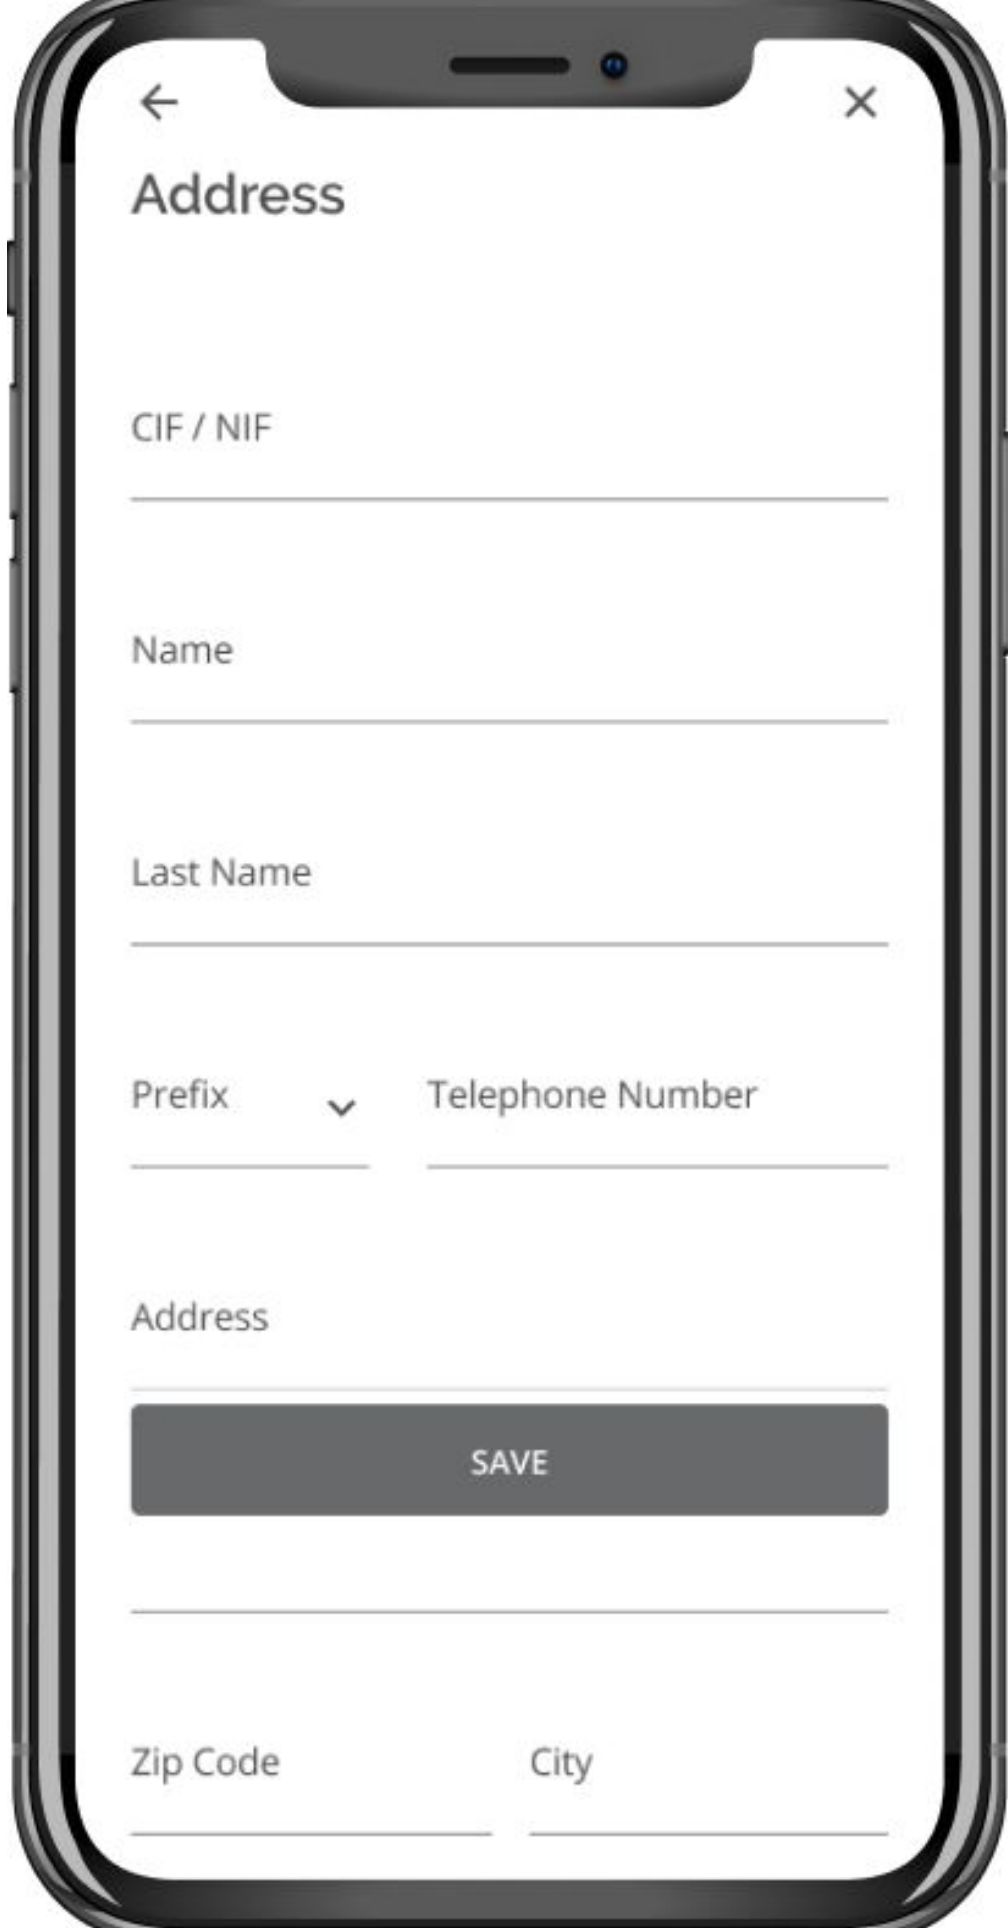

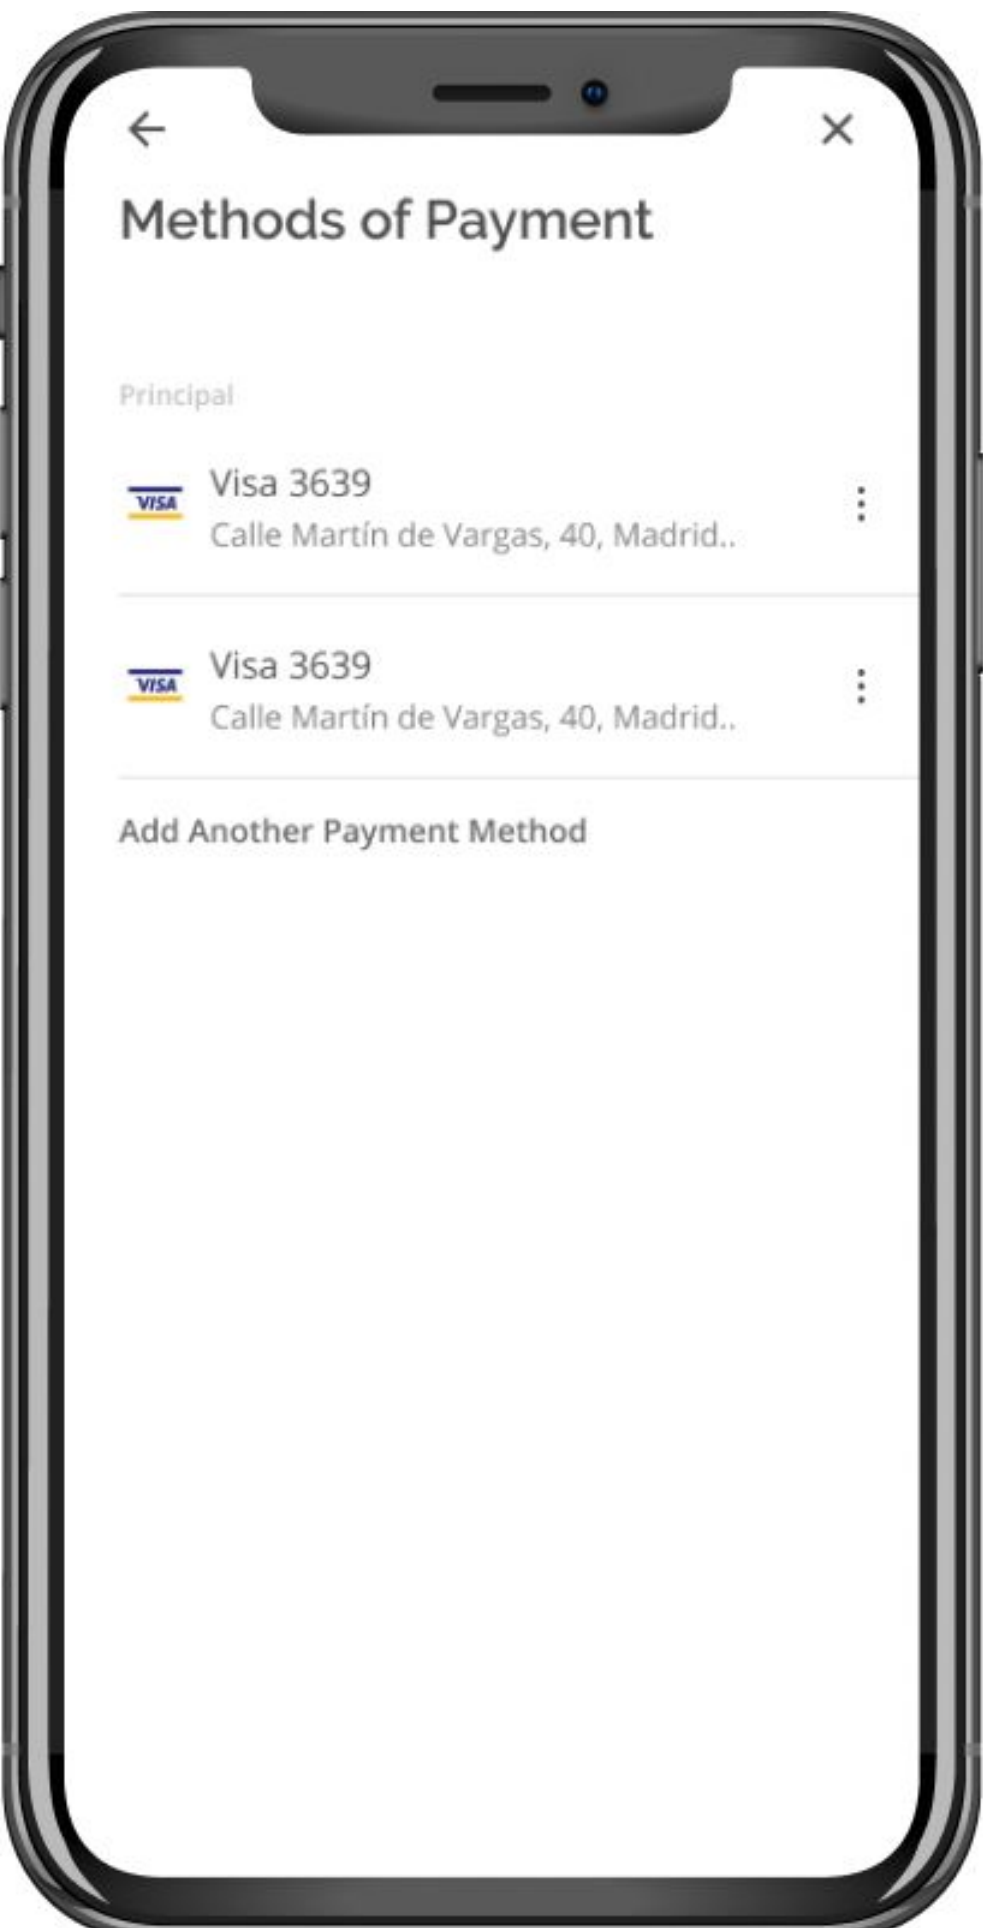

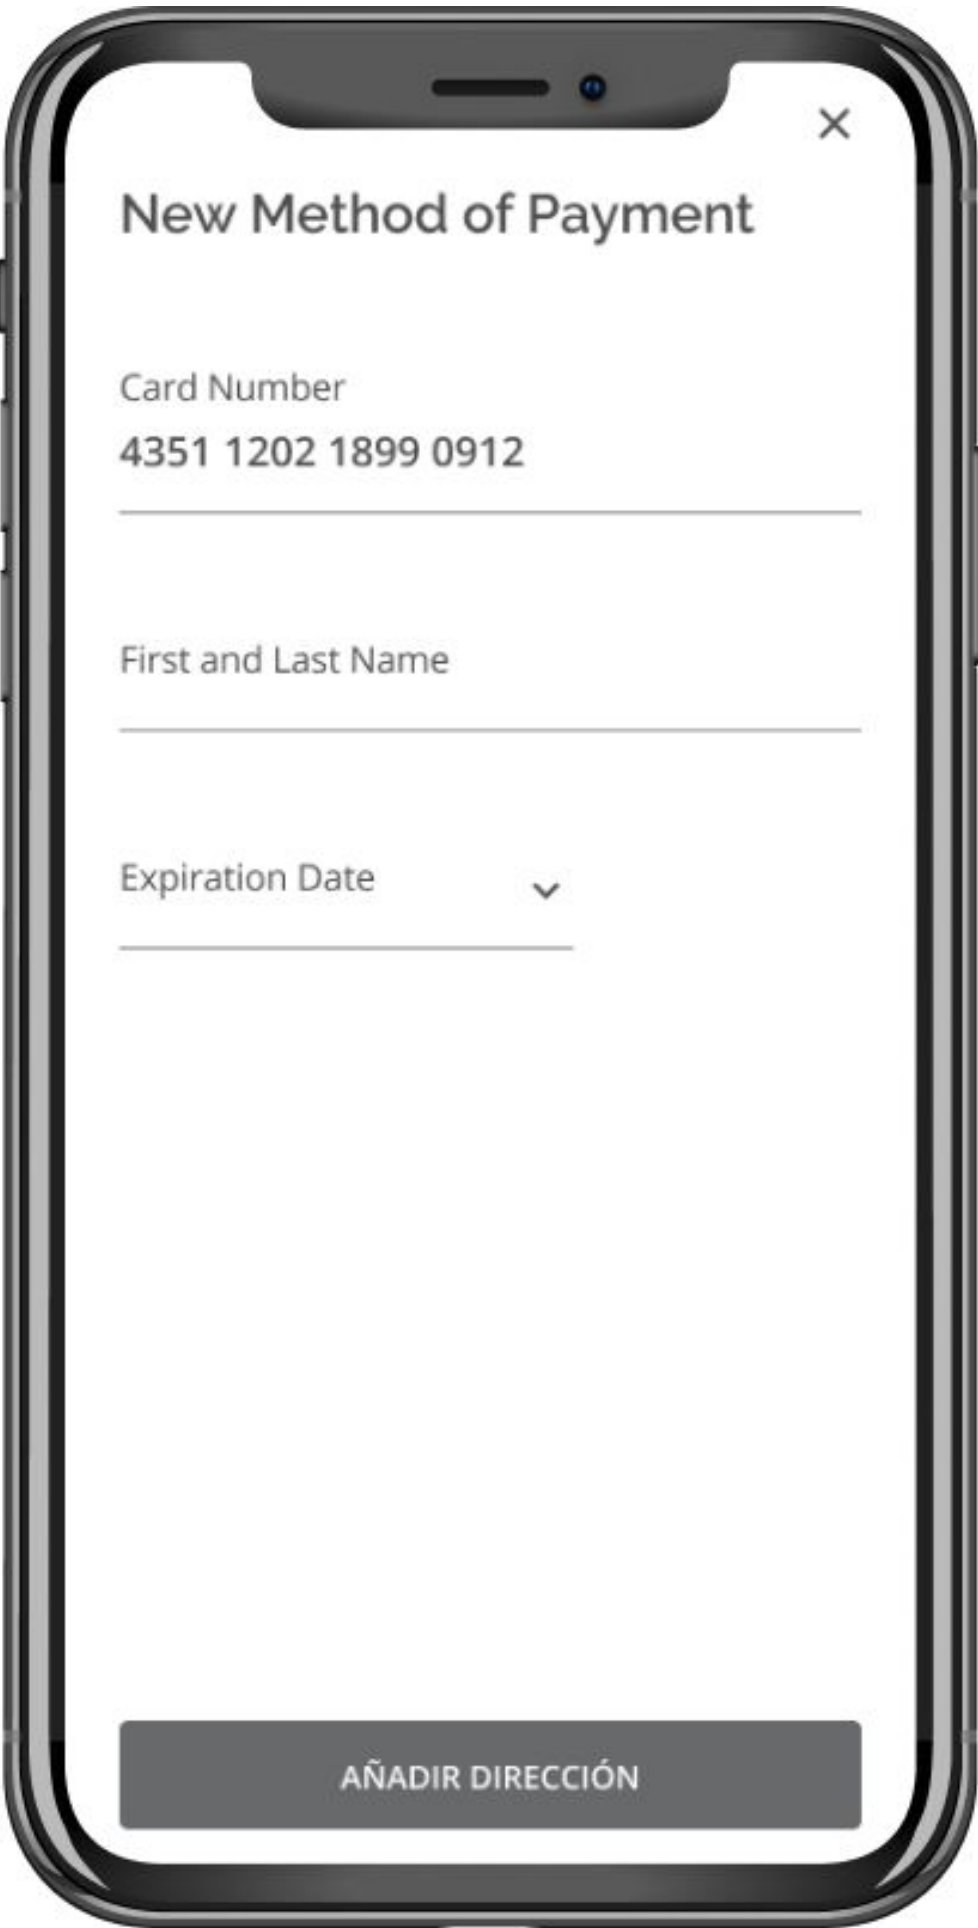

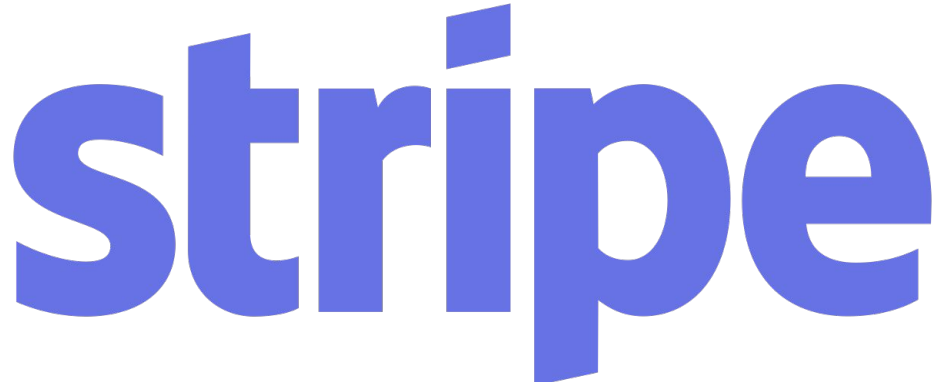

Solutions

Payments

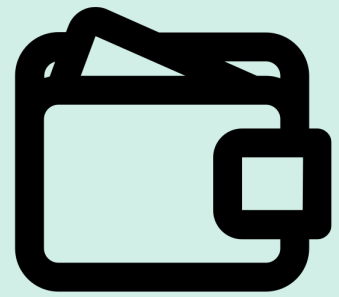

Through the App, customers can make the reservation payment.

The App will request the payment information which will be used to pay the amount as a requirement to make the reservation through this channel.

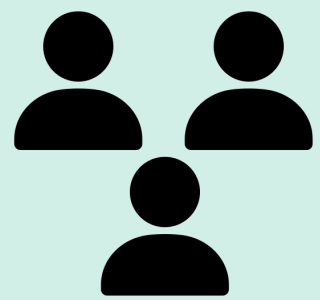

Solutions

Benefits

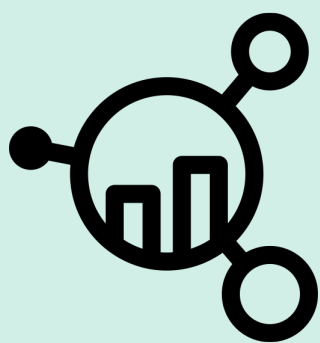

Reduces operational costs: Records management, contracts, invoices, customer documentation etc.

Improve the experience of your customers who will not have to wait in line to pick up their vehicle.

With this App, the customer will only have to go through a window to collect the key. The rest of the processes will already be done.

New sales and marketing channel for rent-a-car that will allow them to achieve greater customer loyalty.

An aerial, top-down view of a multi-level parking garage. The structure is composed of concrete and metal grating. A single white car is positioned on a ramp in the center of the frame. The entire image is overlaid with a semi-transparent blue filter. The text '02. To the connected car' is centered over the image in a large, bold, black font.

02. To the connected car

02.

For the connected car

Step 1

We carry out a **compatibility study** of your fleet to determine which hardware solution best suits your needs. Once the vehicles to be connected have been selected; **We accompany you throughout the installation process** to perform it in the best possible way.

We have agreements with a network of installers with extensive experience in the international territory to carry out the installation.

We connect your vehicles
to the cloud

Partners

To the connected car

Our systems are integrated with a wide range of suppliers of **Trackers and Devices** that allow the control of opening, closing and starting of the vehicle (in addition to reading relevant data) with a lot of experience in the sector.

Therefore we can offer you solutions adapted to your needs and the type of use you want to carry out with your vehicles to offer you the data and functionalities that give you more value.

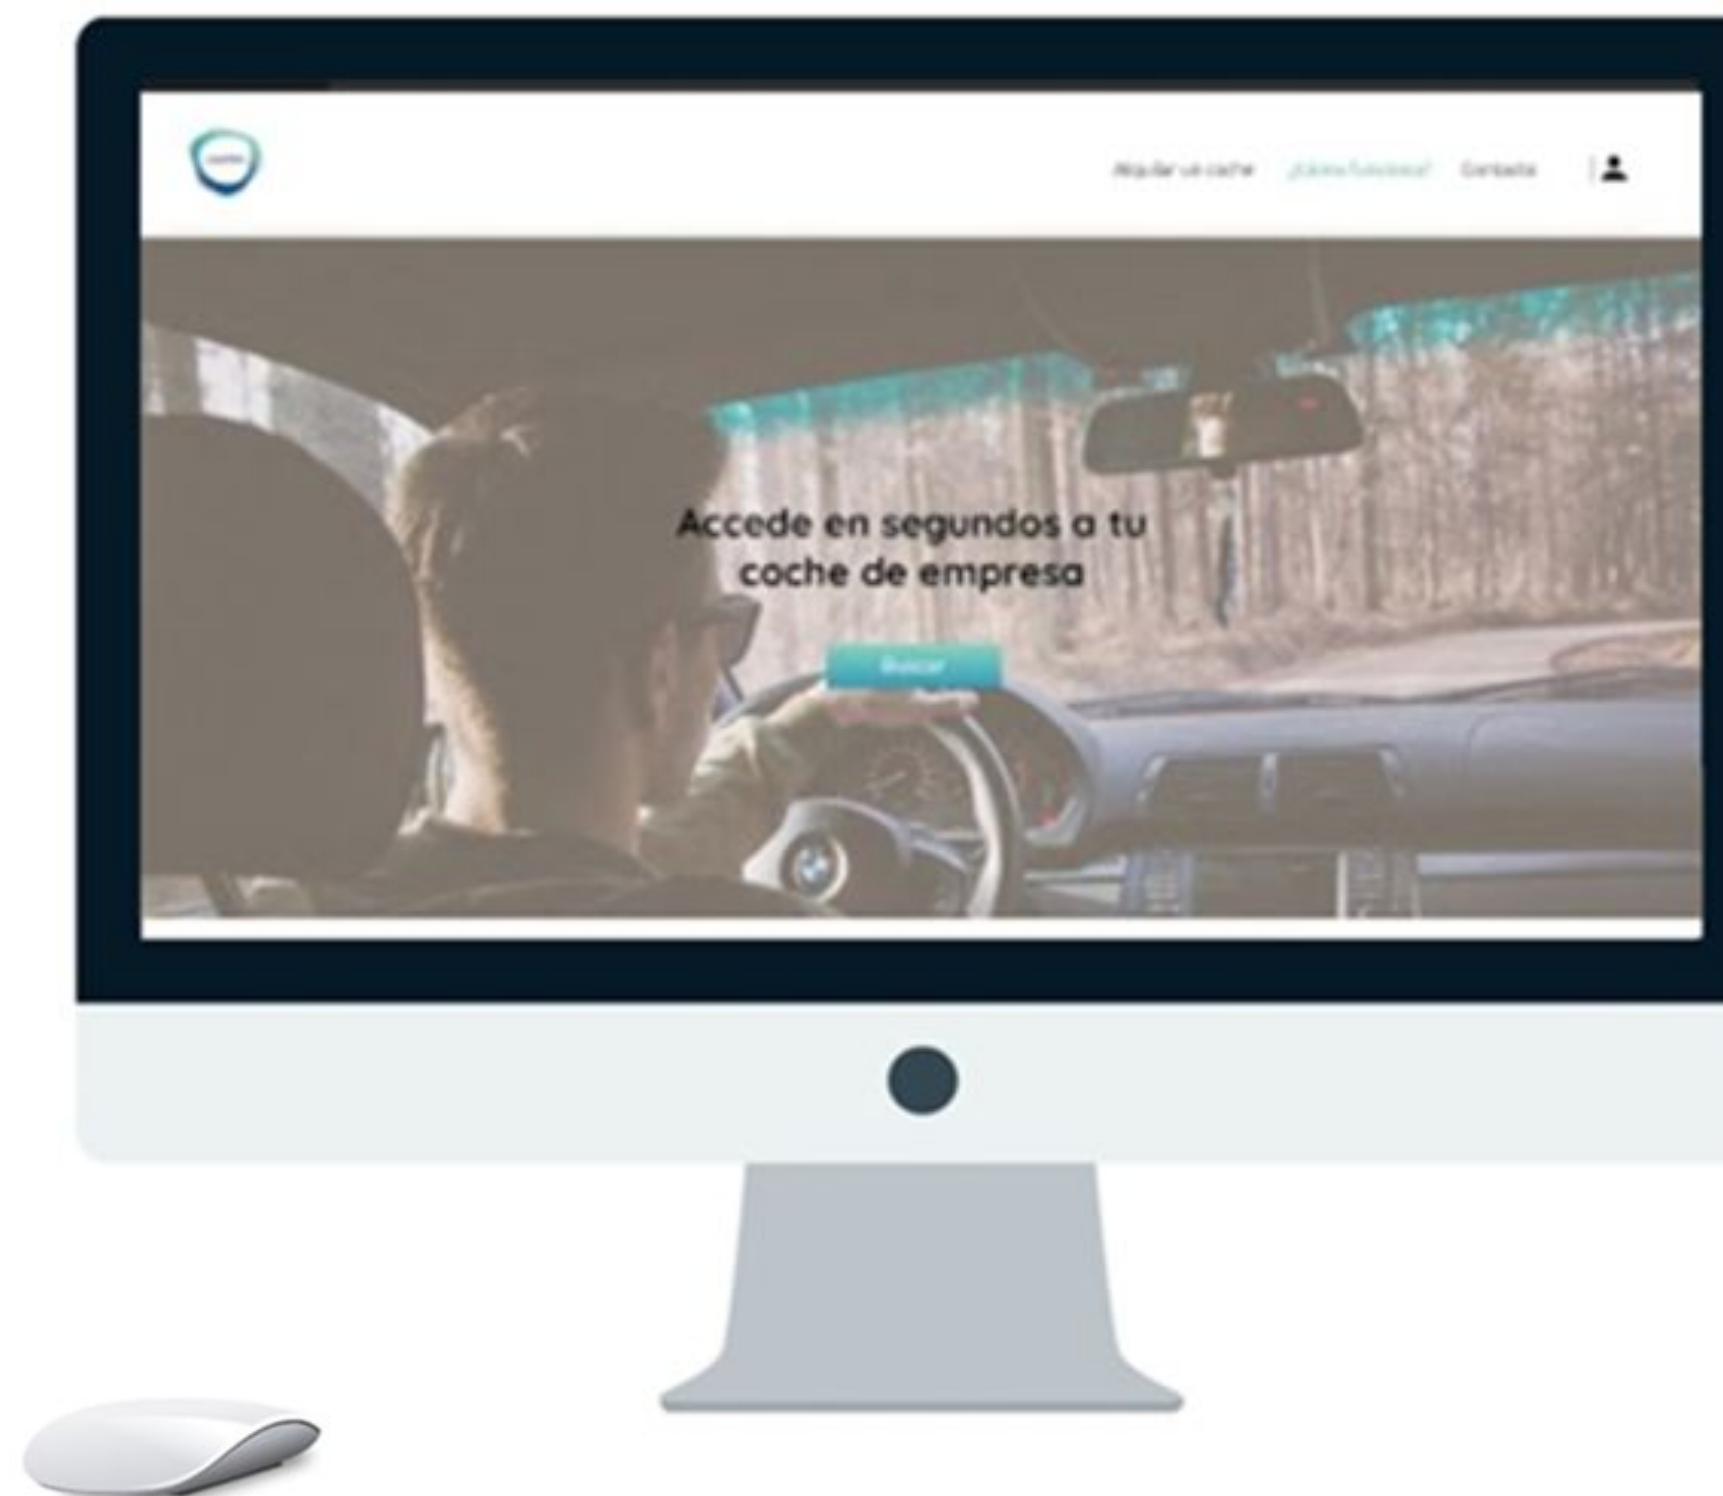

Admininstration Panel

Management

Step 2

We prepare a **Backoffice** with a custom **administrator panel** through which you can manage all reservations, users, location, use and even remote opening and closing of your connected vehicles.

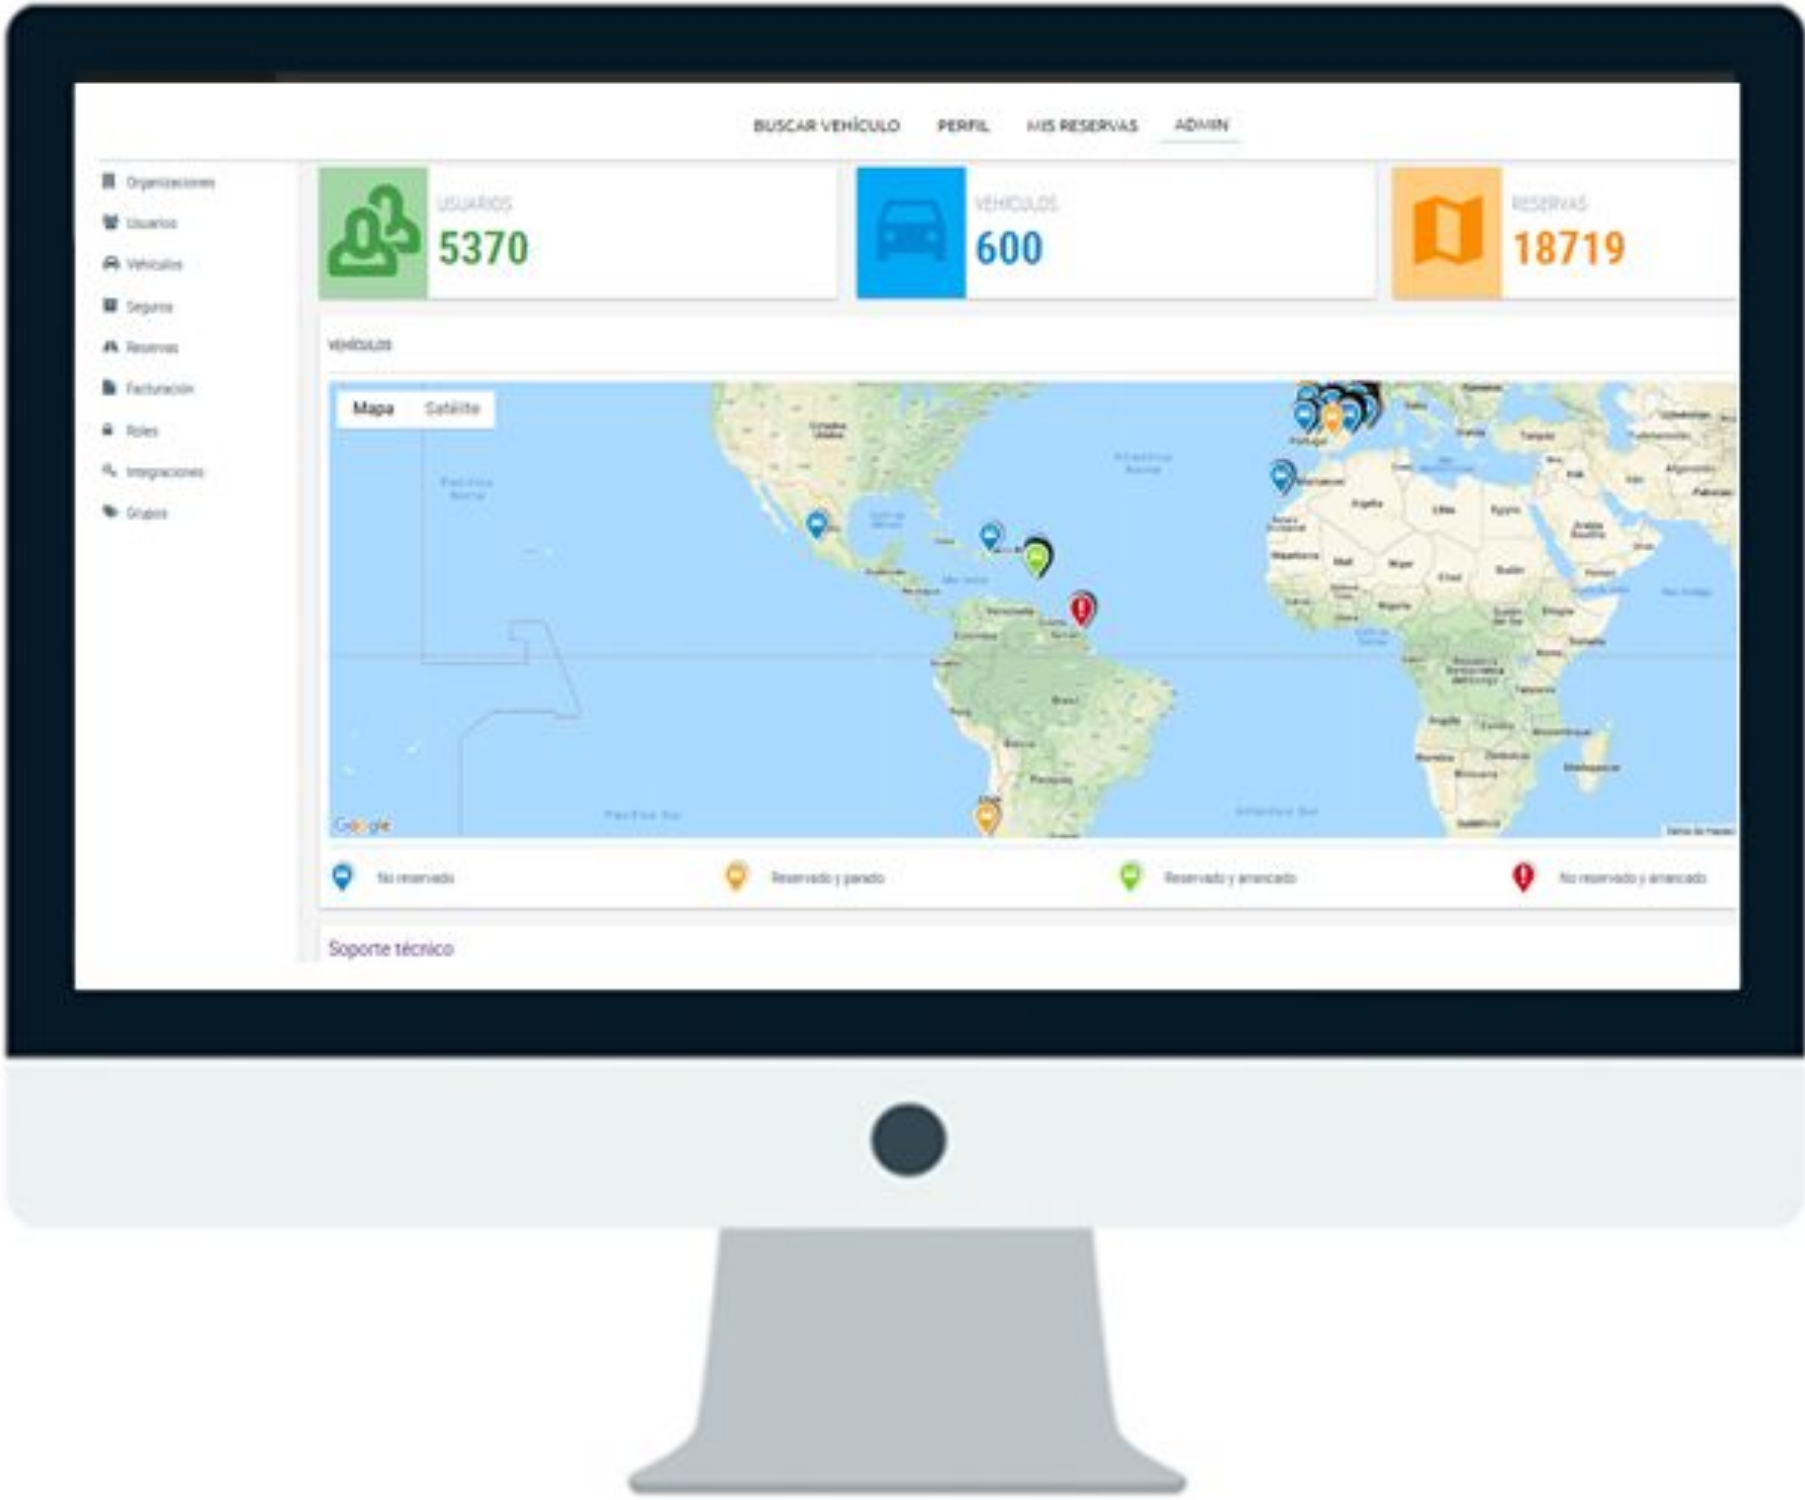

You will also have access to the **modules of damages, payments, billing, alerts etc.** that will give you a **360 view** of what is happening in your digital rentals allowing optimal management of your rent-a-car.

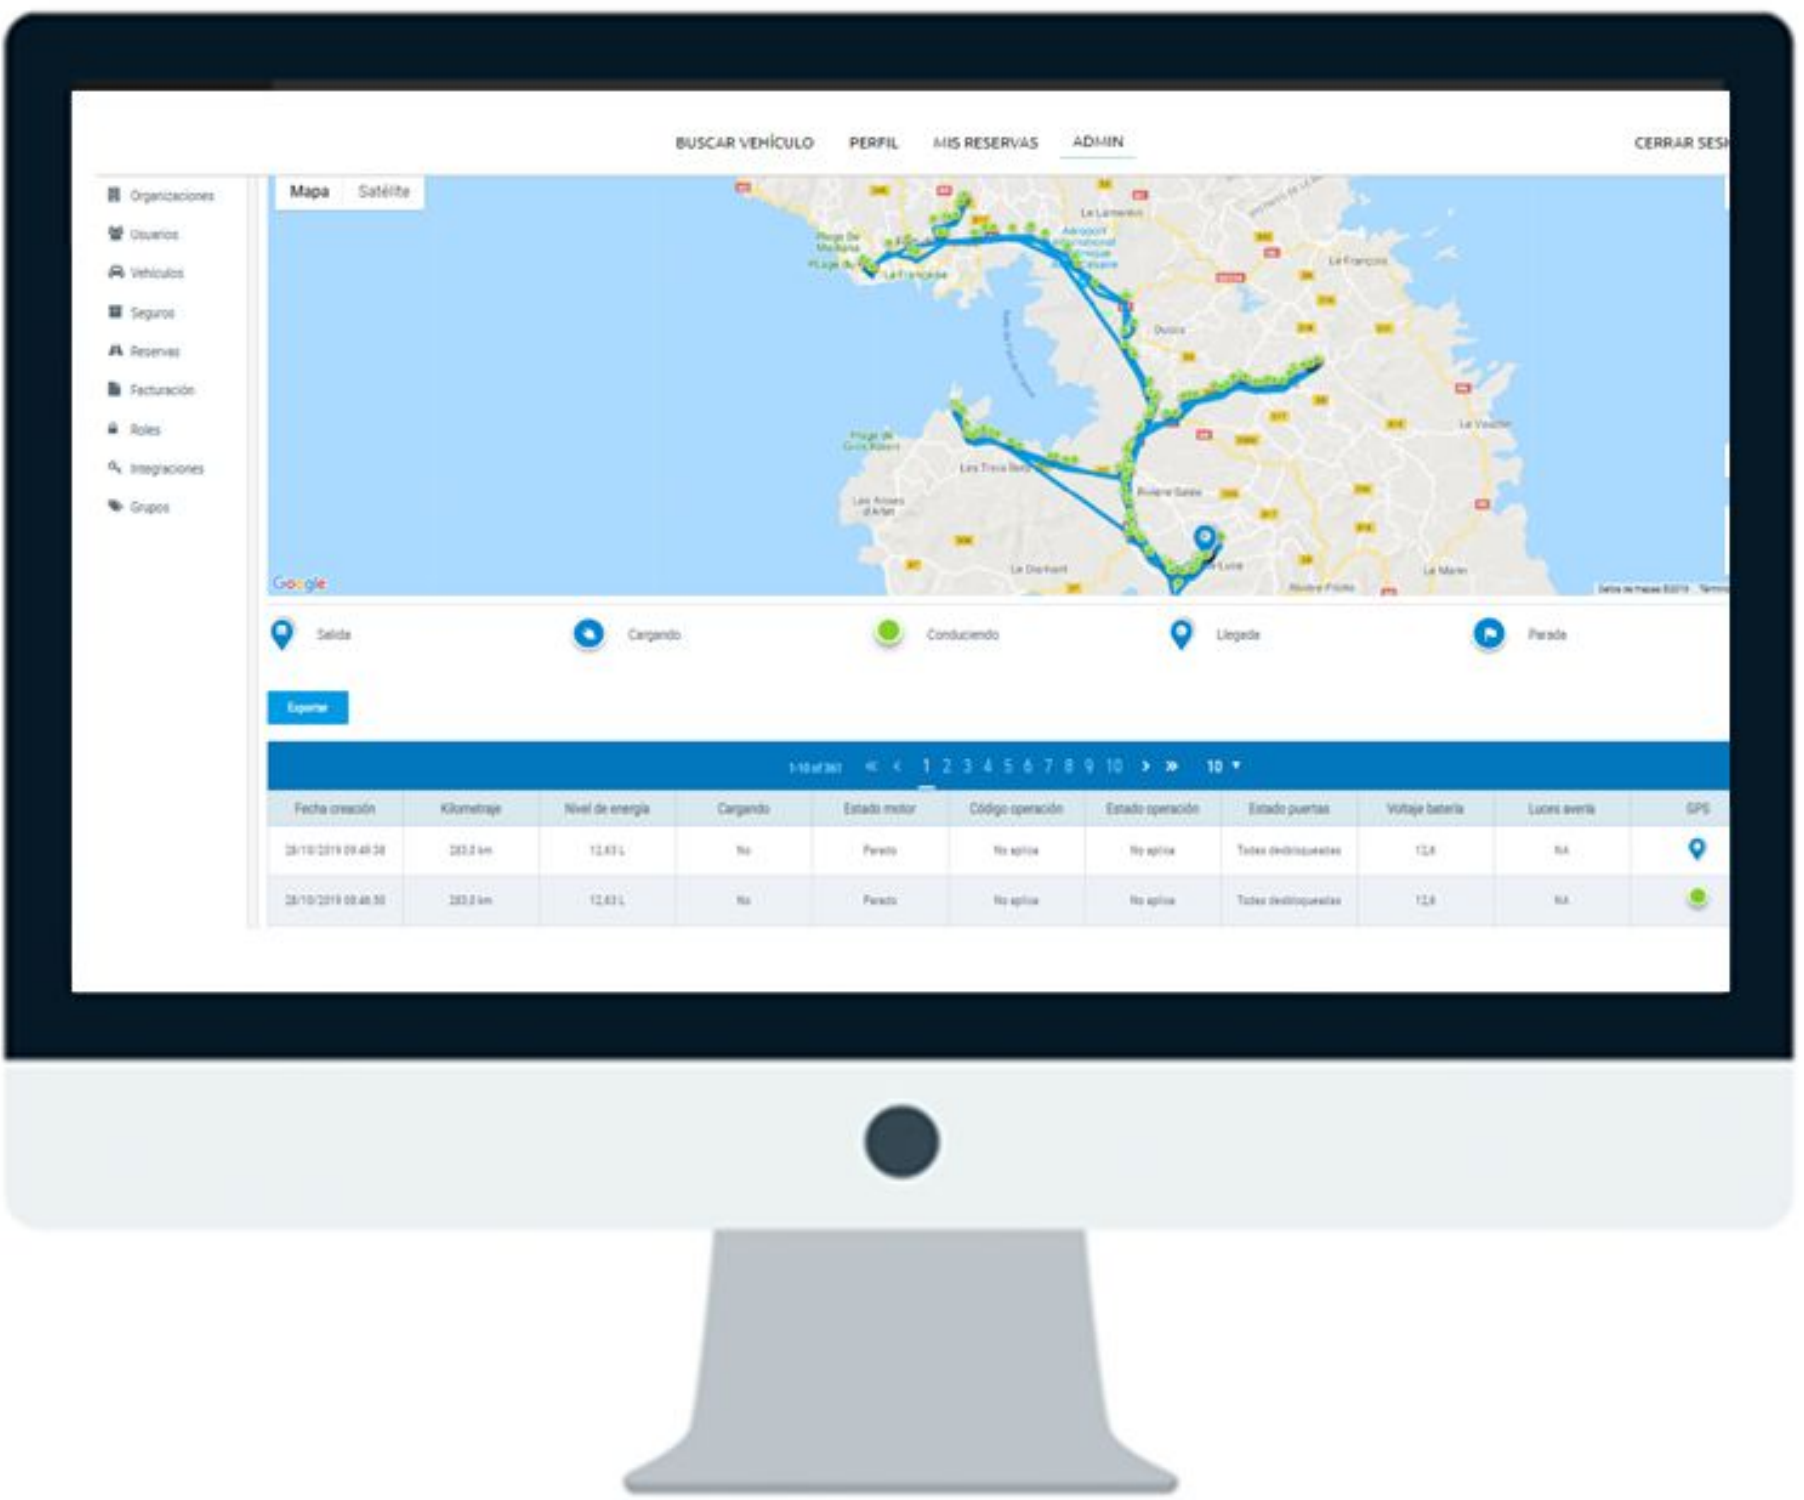

Platform

Management

Reservations, users, vehicles, etc.

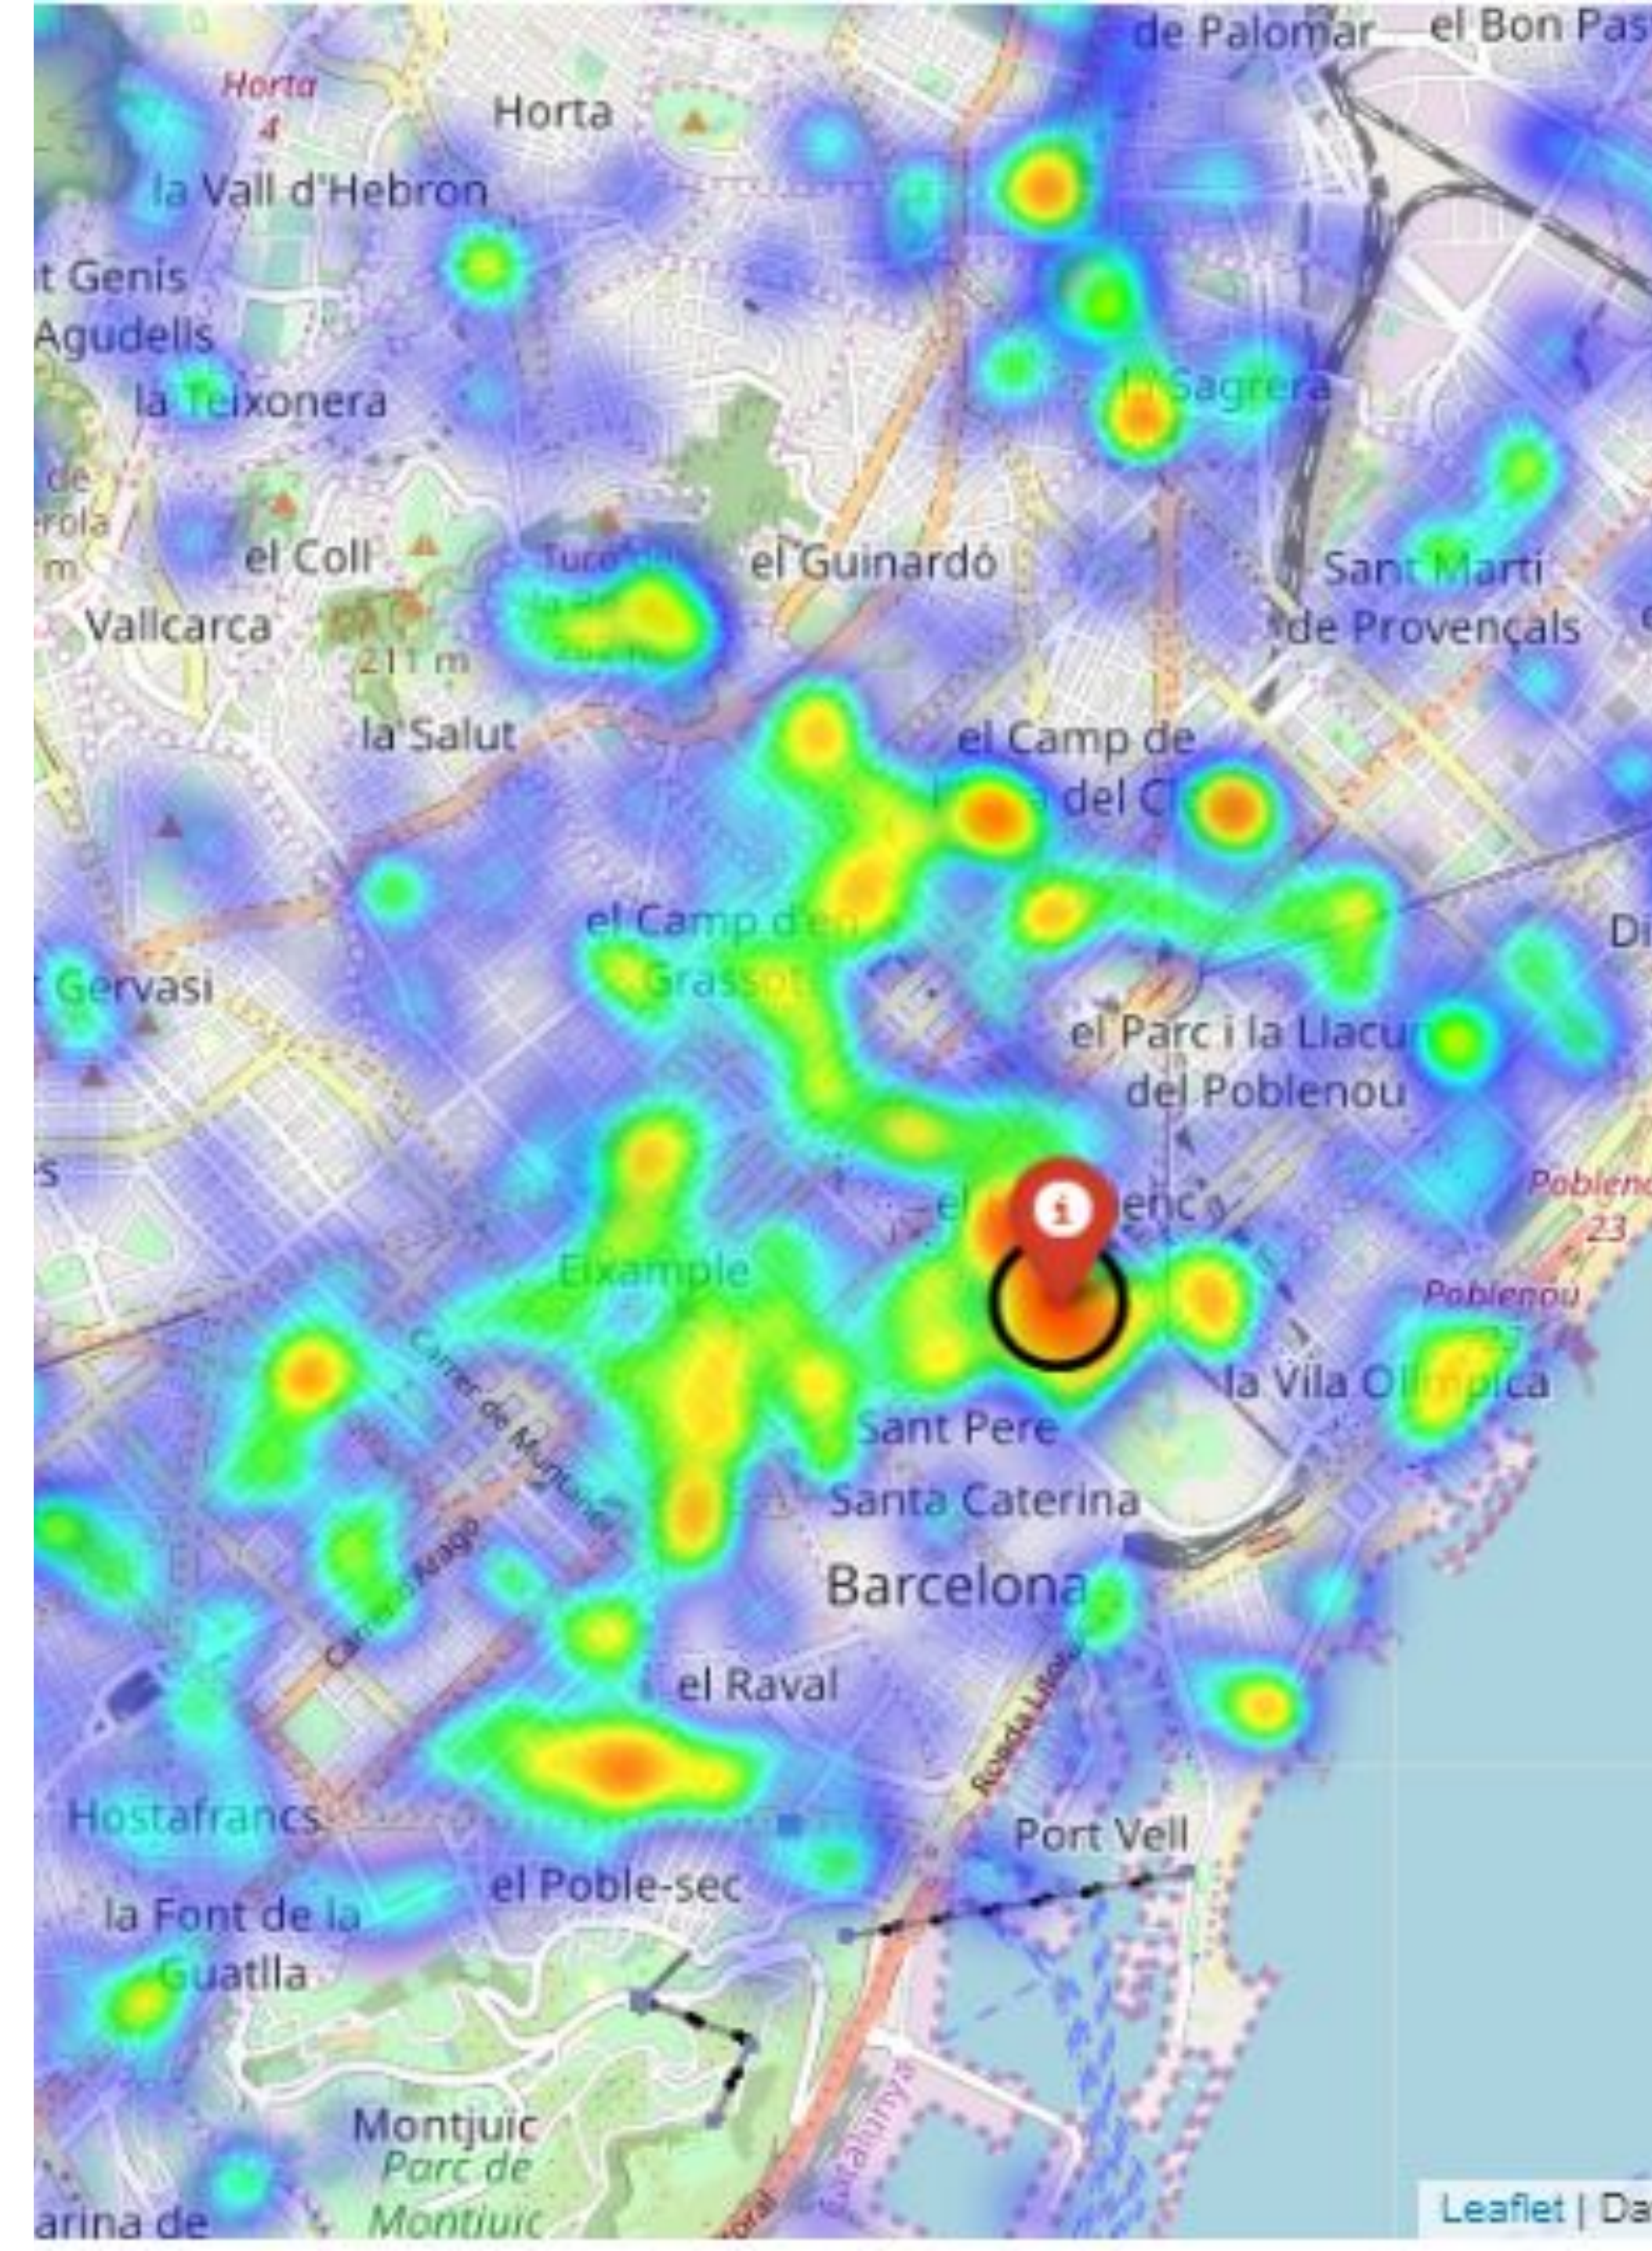

Routes associated with the locations

Analytics

Make sure that you have all the data needed for making the best decisions and achieve operational proficiency leading towards higher yields and profitability.

Heatmaps

Understand where your users are when looking at the app, when they start/finish a trip or where they stop during the journey, so you can optimize the position of the fleet for operation proficiency and maximization of profitability.

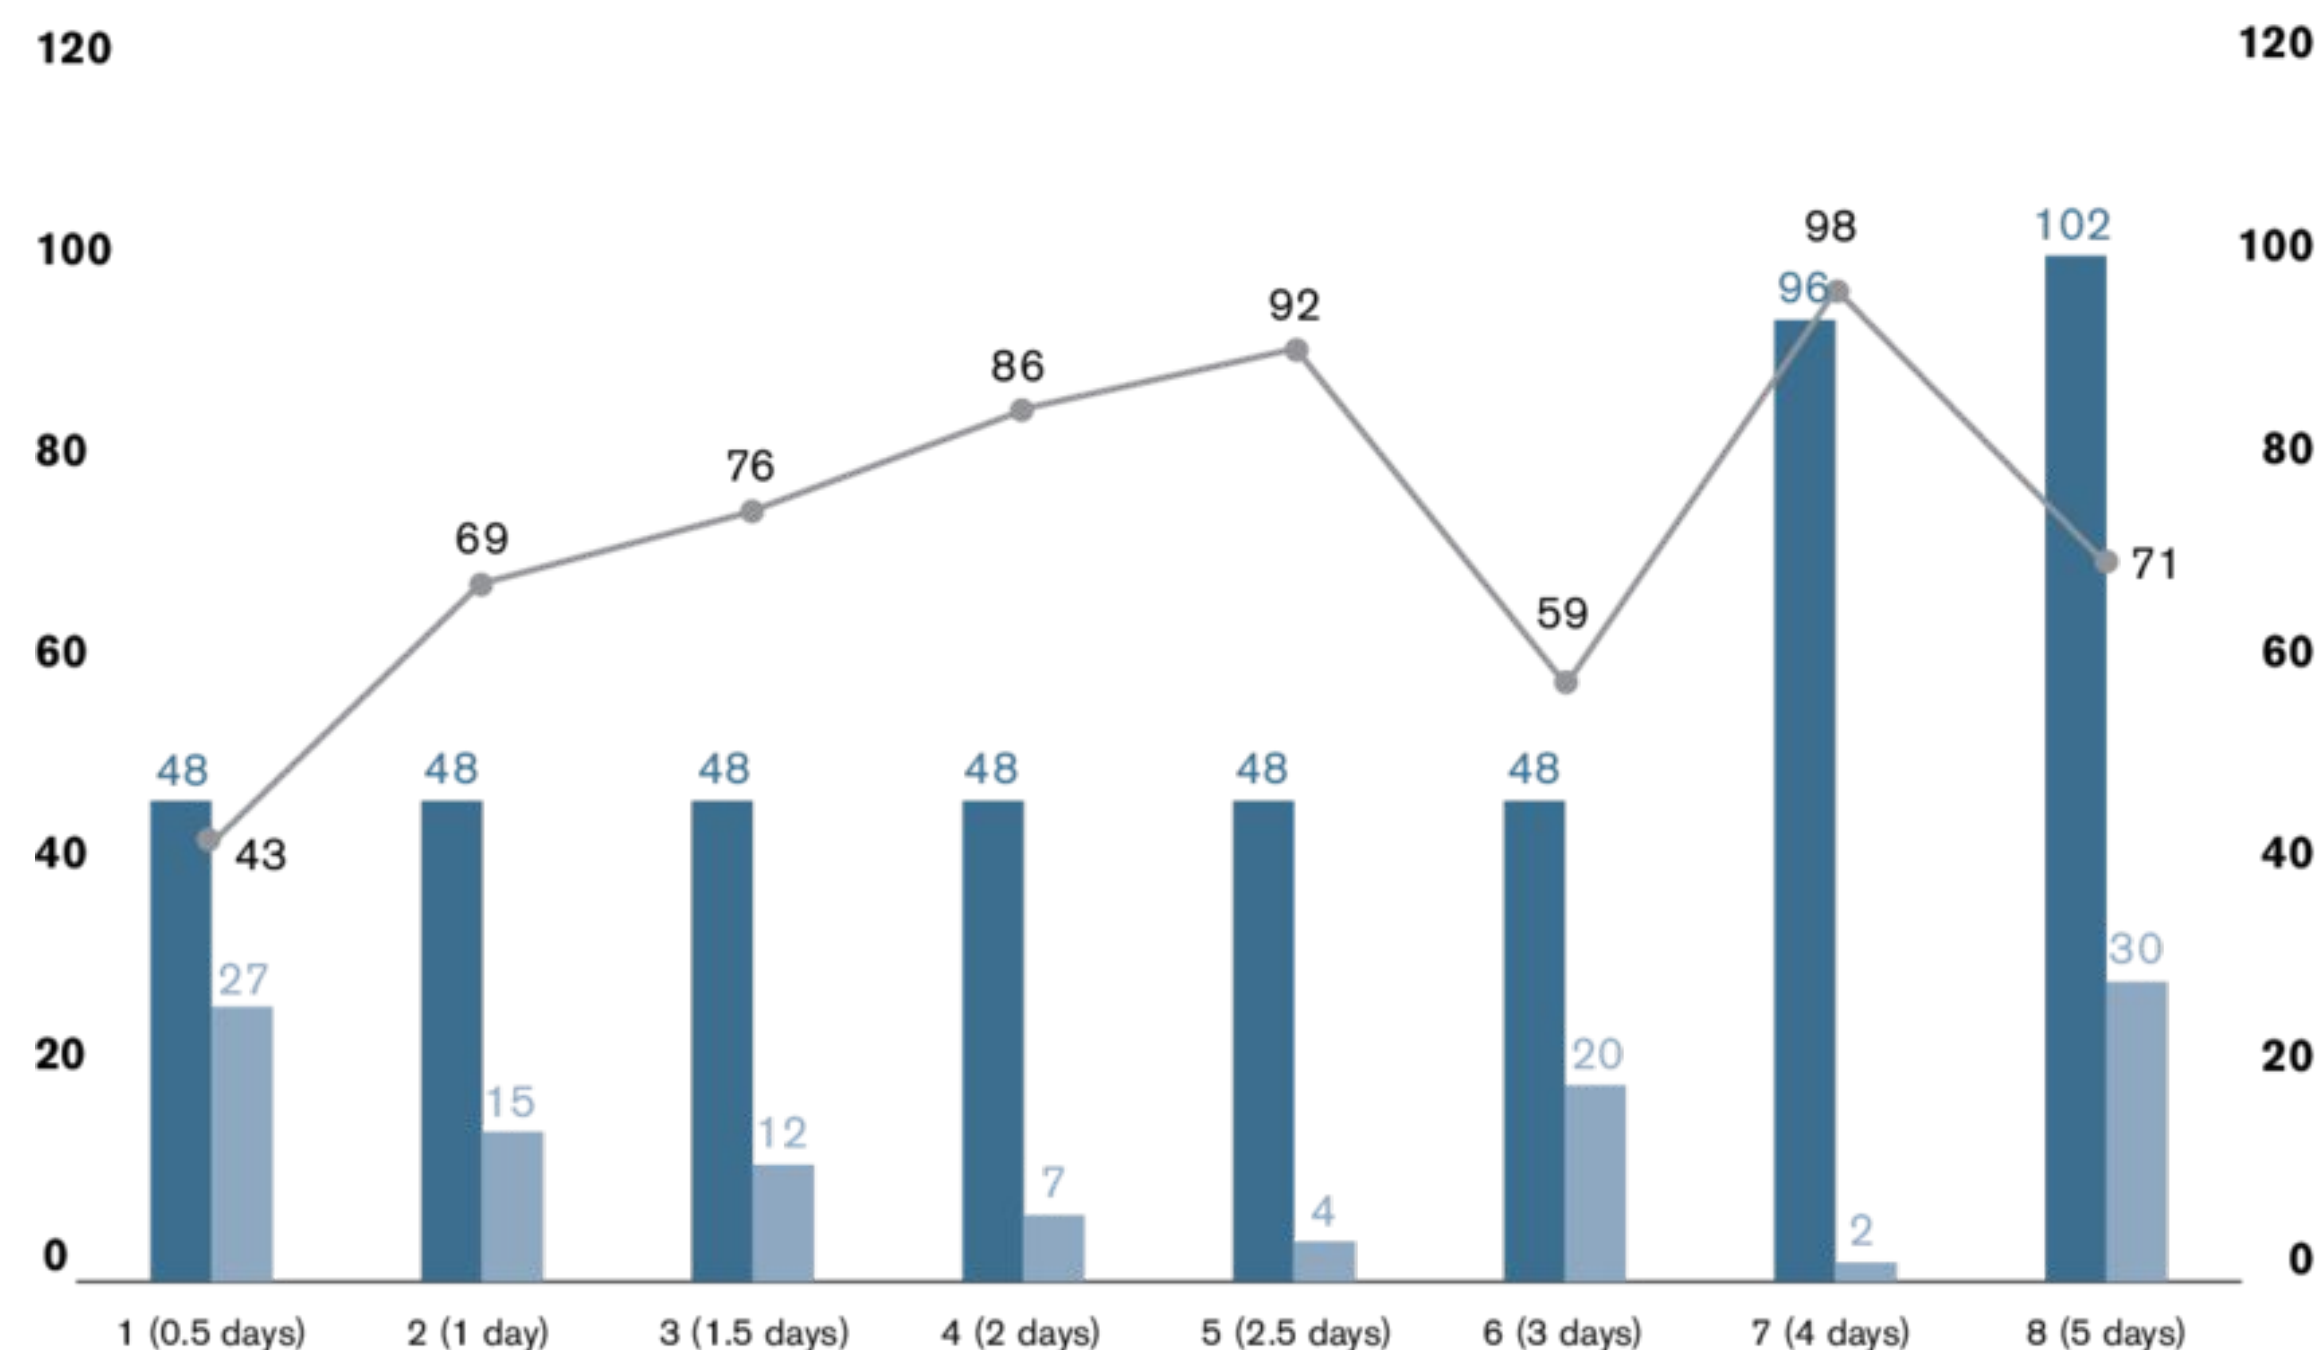

Analytics

Make sure that you have all the data needed for making the best decisions and achieve operational proficiency leading towards higher yields and profitability.

Financial KPIs

Helps you understand how much profit your fleet is making on the fly.

KPIs per day, week, per car or group of cars to track the income depending on the different locations, or business models.

Access to the Vehicle

For the connected car

Mobile Access

Your customers will be able to access the connected vehicles that you make available through their mobile phone.

They can access the vehicles even if they are in garages or areas without coverage thanks to Bluetooth connection.

Similarly, the administrator may, if necessary, allow the opening / closing of the vehicle remotely by SMS.

RFID Access

Once the vehicles have the devices connected; They can be accessed via NFC cards that, which, can be customized with your rent-a-car logo

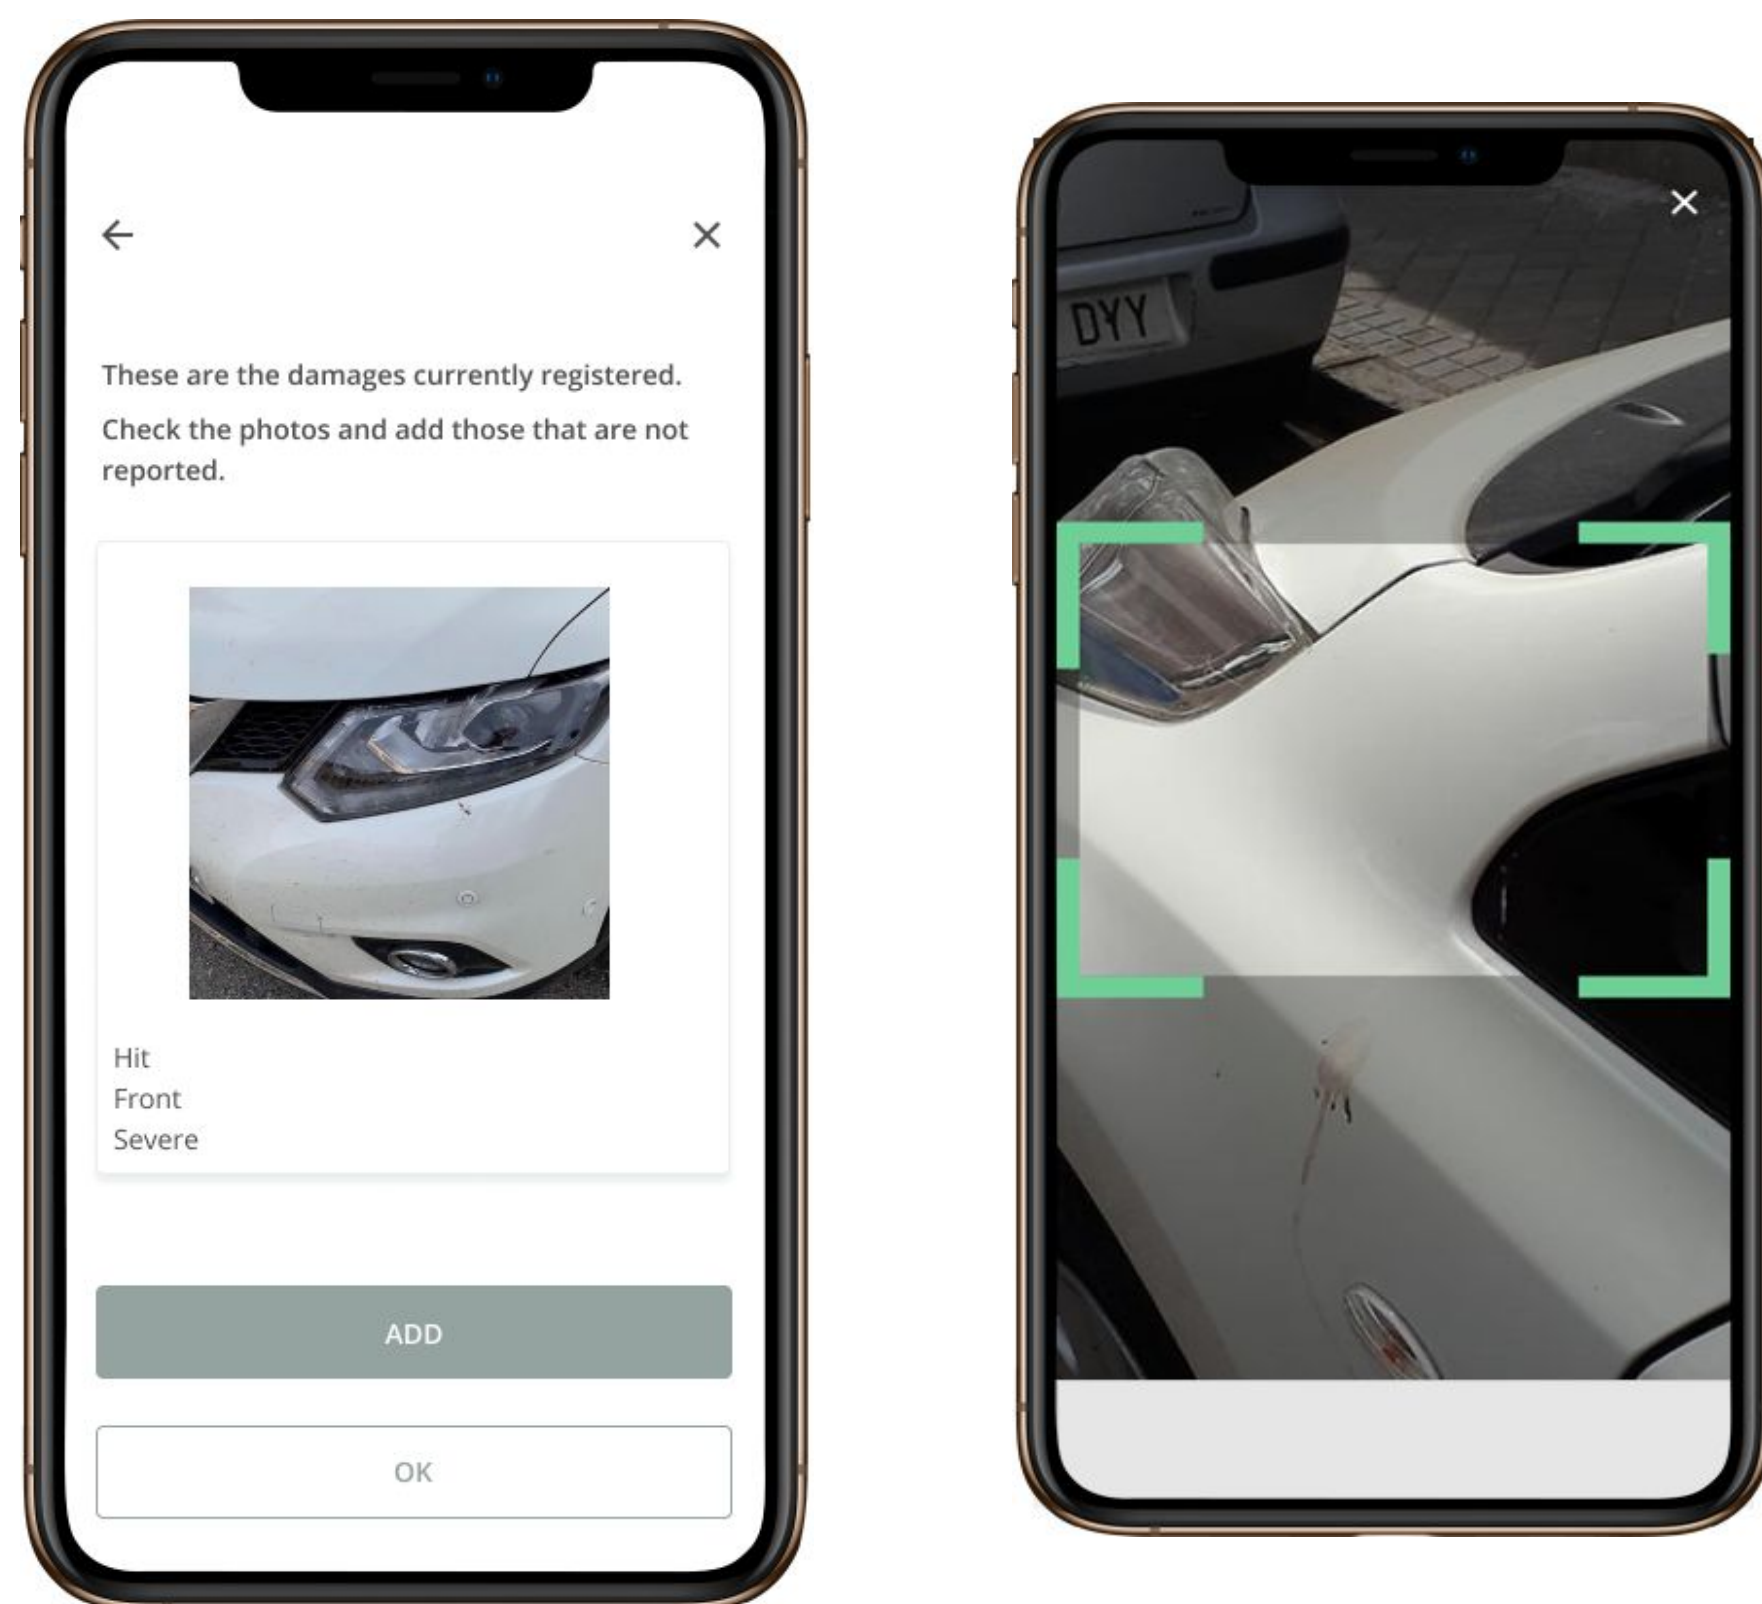

This option is usually preferred for elderly clients or to offer rent-a-car services to hotels and / or companies.

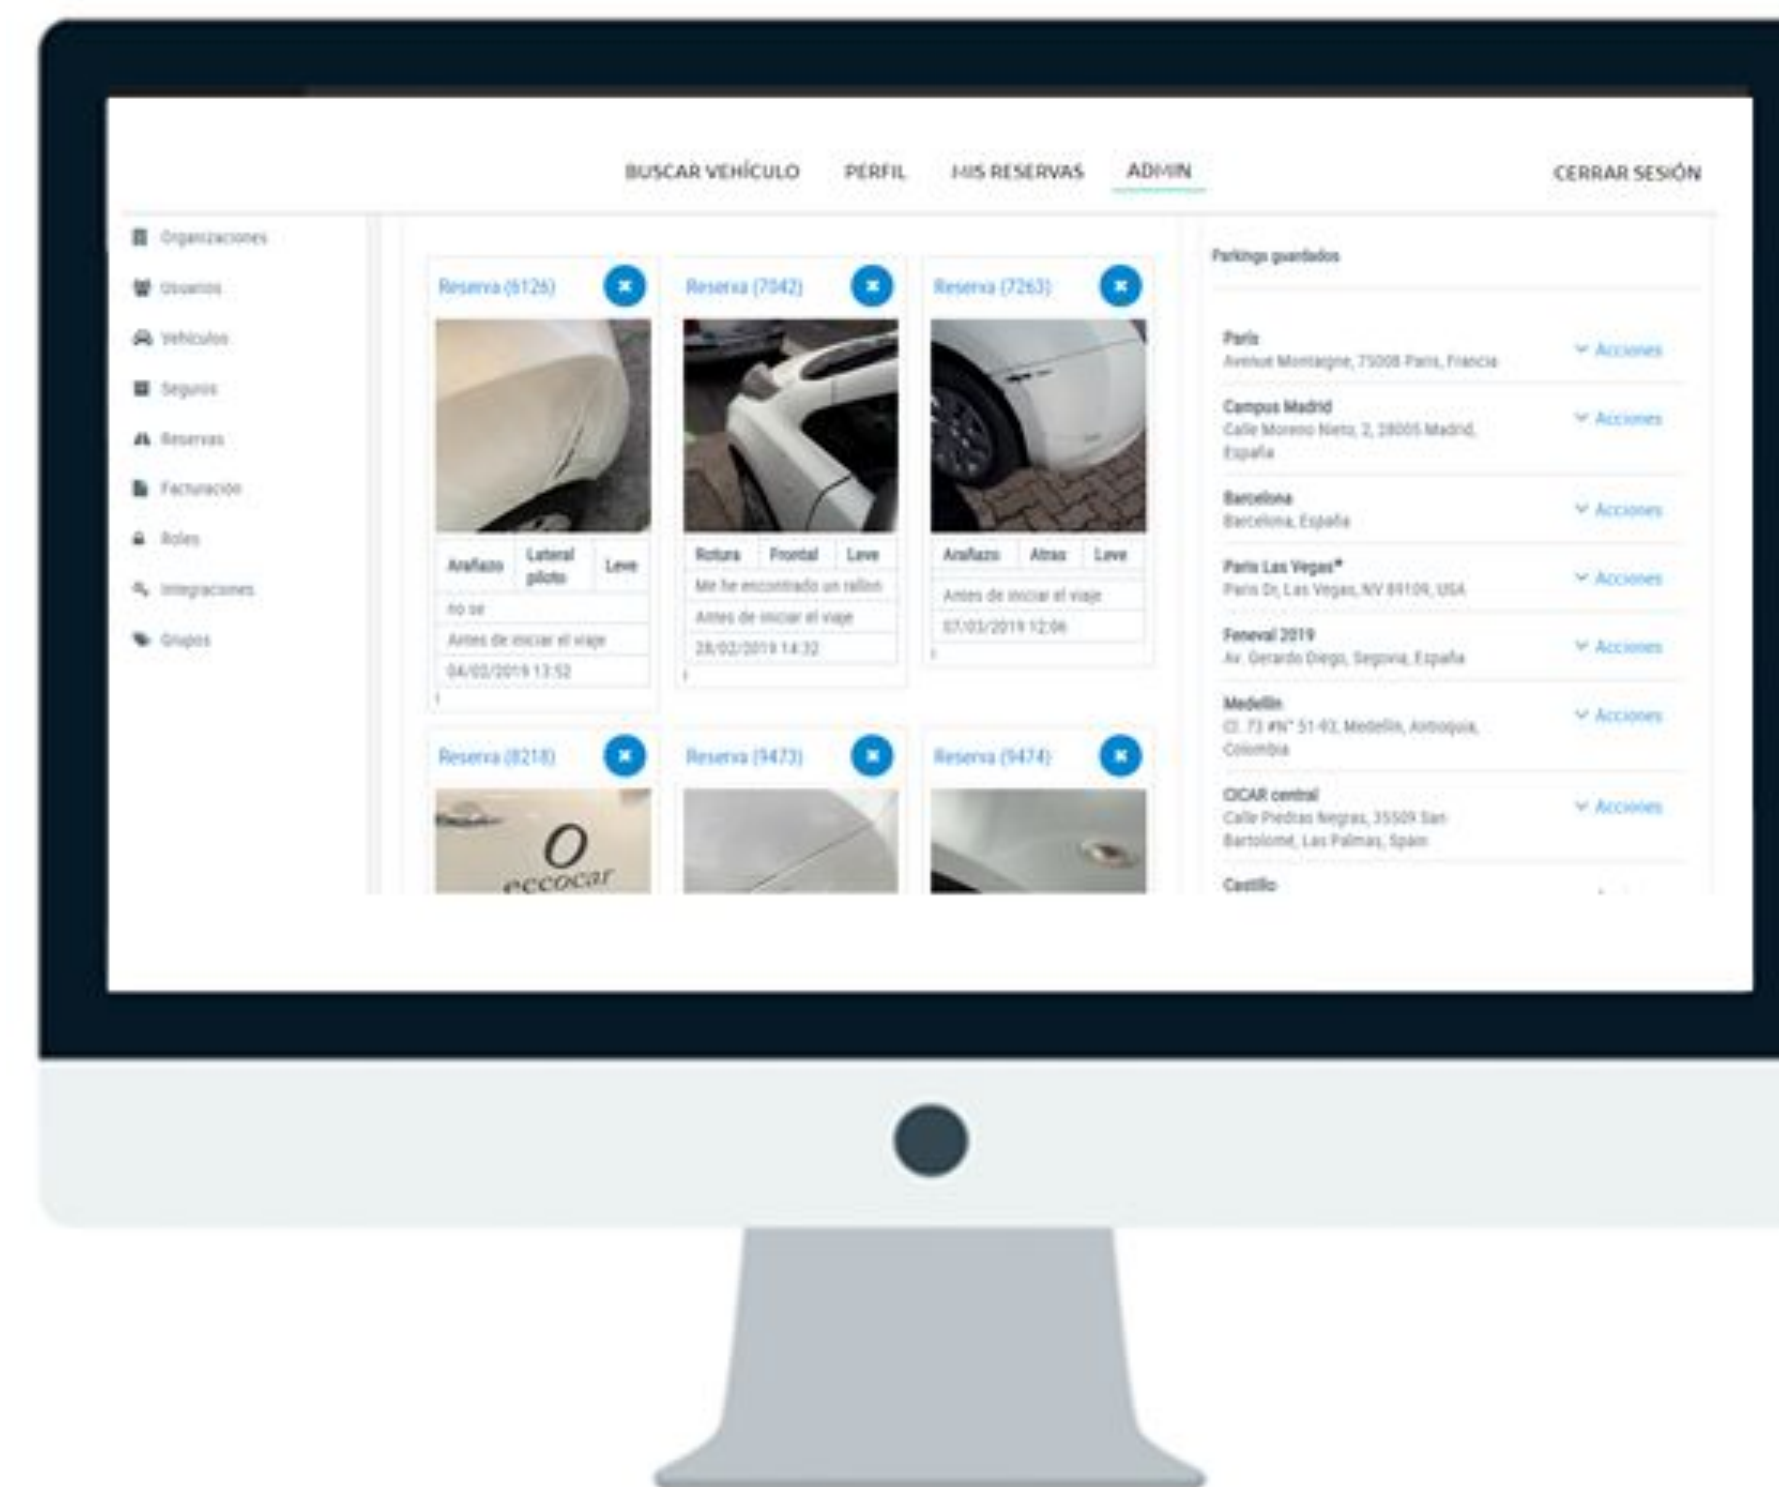

Damage Management

For the connected car

In the administrator panel, the person in charge of the rent-a-car will be able to see the history by reservation of the damages of the vehicle in his file.

Your customers can report the damage of the vehicle at the beginning and at the end of the reservation with photos of them through their mobile phone.

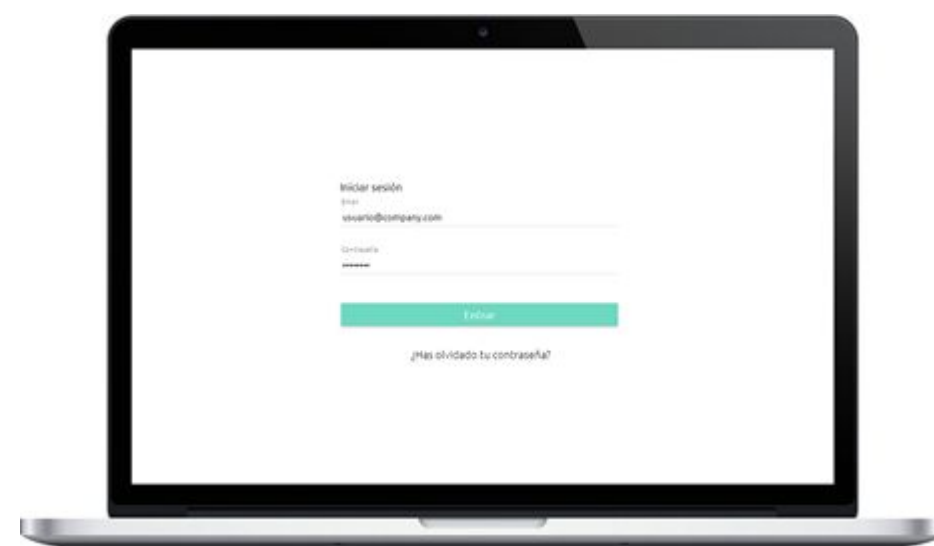

They will be able to see the history of damages to the car and actively accept them when the reservation begins, all of them will be monitored.

Additional Functionalities

For the connected car

Invitations & Groups

- Invite users to app and/or platform
- Segregate car usage by creating groups.

- Designated vehicles for specific groups

Rules & Alerts

Set up events you would like to monitor and establish the way you want to receive the alerts.

New Business Models

For the connected car

Multimodal Platform:
Self Service / Free Floating

Multiple vehicles:
Cars, Mopeds, Bikes and E-Scooters

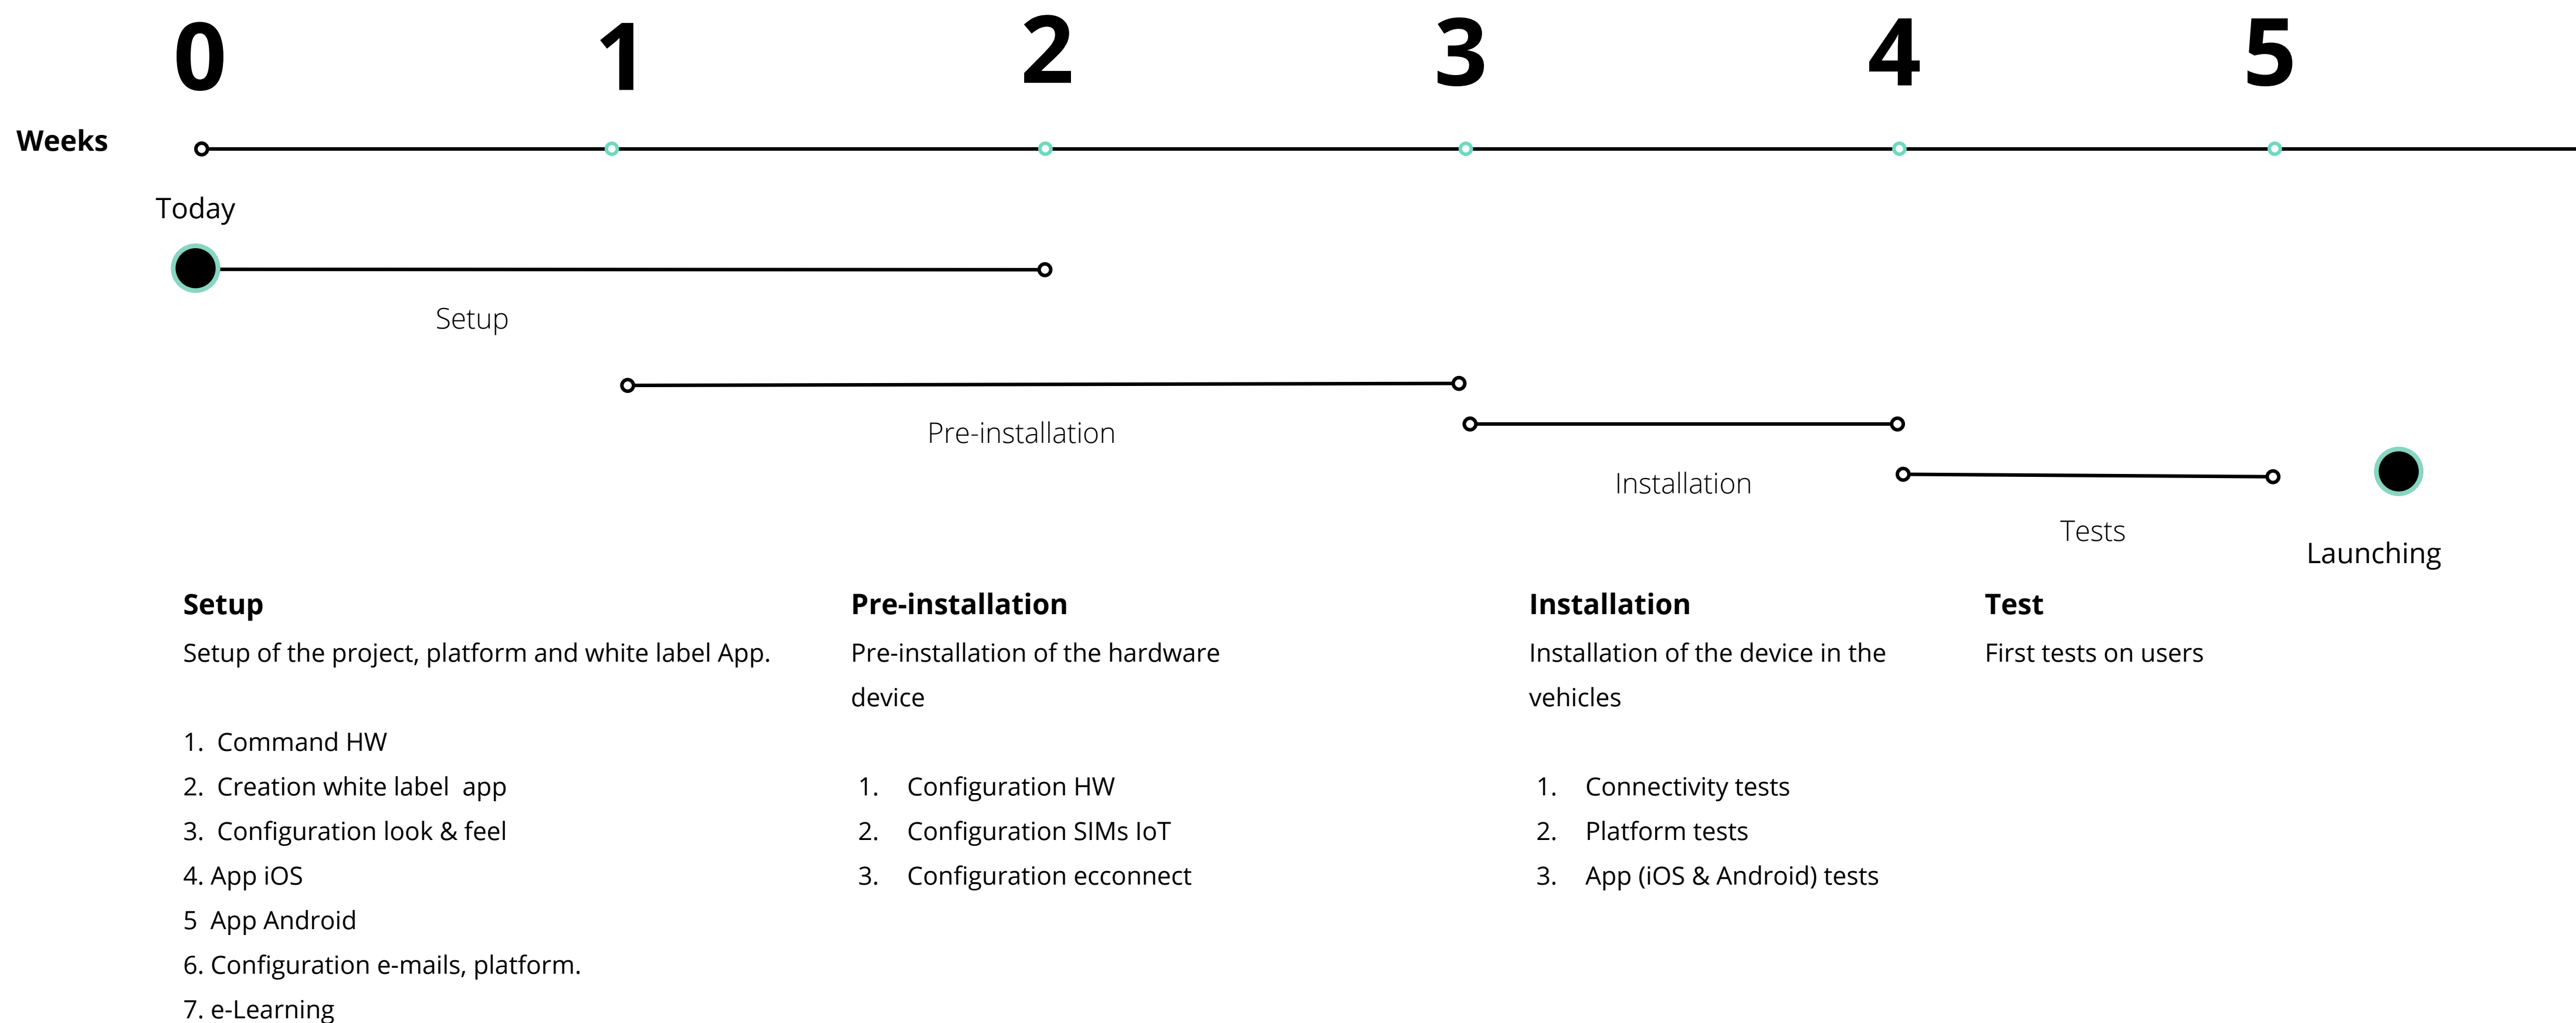

03. Planning

A hand with a black smartwatch is pointing at a map on a wall. The wall is covered with several sheets of paper, some of which are pinned with colorful pushpins. The map shows a region with various locations and numbers. The text 'Elegir puntos' is visible on one of the papers. The overall scene suggests a planning or strategy session.
